

RFR 5014

SERIES 5000

CardModules

2RU Rack Mount Chassis + Power Supply

Description

The primary building block to a Series 5000 system is the rack frame. The RFR 5014 is a 2RU rack mount chassis which can accommodate up to 10 low power Series 5000 modules, plus a rack controller and primary / redundant power supplies. Each module has its own associated rear connection panel so a mixture of low power modules can be accommodated.

The RFR 5014 has no forced cooling (fans) so it is only recommended for low power modules like distribution amplifiers. (The RFR 5012 has integrated cooling and is recommended for all modules).

The RFR 5014 front cover is hinged for easy access and can be easily removed for system installation and maintenance if required.

All plug in modules, plus the primary and redundant power supply are hot swappable and are easily accessed from the front of the rack. Module alarm LED's are visible with the front panel closed.

The rack is pre wired for the optional LYNX APPolo control system, and includes the termination panel. Field upgrades to add the control system are fast and simple, its just a case of plugging in the rack controller and making the connections to the termination panel. The termination panel also includes various GPO alarm outputs.

The construction is extremely robust, suitable for studio installations and the most demanding mobile applications. The frame is constructed from non magnetic stainless steel and is fully compliant with EMC / FCC RFI interference emission regulations.

Features

- High quality steel construction, 2RU high
- Compact, very small depth, ideal for mobile applications
- Recommended for low power Series 5000 modules
- Supports up to 10 modules + controller + primary and redundant power supply
- Hinged front panel, which can be removed if required
- All modules hot swappable
- Pre wired for LYNX APPolo Control system
- Includes primary power supply with optional redundant supply

2RU Rack Mount Chassis + Power Supply

Specifications

Mechanical	
Size	2 RU high x 325mm deep
Mounting	Standard 19" rack mount
Weight (empty)	4.9 kg (with single power supply)
Connections	All connections of rear of rack frame
Capacity	
Processing Modules	Up to 10 x Series 5000 low power modules (any mixture)***
Controller	1 x rack controller
Power Supplies	1 x Primary (included) + 1 x redundant (optional)
Connections (termination panel)	
LAN connection	RJ 45 (10/100 Base T) **
Control	RJ 45 input, and RJ 45 daisy chain output **
Extend	RJ 45 input, and RJ 45 daisy chain output **
Alarms	GPO outputs / GPI input on terminal strip Alarm Major + Alarm Minor - Relay contact closures (max 220VDC/250AV 2A) GPO outputs - Opto coupled outputs (max 60VDC/0.6A) GPI Input - Opto coupled input (max 60VDC/0.6A)
Reference Input	BNC analog sync reference input. Bi-level or Tri-level, active loop output
Primary AC input*	Standard IEC 60320 C13 AC power connector, double pole fused (2A)
Redundant AC input*	Standard IEC 60320 C13 AC power connector, double pole fused (2A)
Connections (modules)	
Connection type	Connections are provided on the individual modules associated rear connection panel.
Electrical Specifications	
Power Input	90-250VAC 47-63Hz
No of AC inputs	2 (completely independent for primary and redundant power supply)
AC connector	IEC 60320 C13 (10/15A) *
Protection	AC inputs are double pole fused (2.0A max)
Power Consumption	150W max.
Safety	IEC 60950/ EN 60950/VDE0805
Ambient	
Temperature	5 C to 40 C Maintaining specifications
Humidity	90% Max non condensing

Notes

- * AC power cords not supplied
- ** Connections not active until the required rack controller is installed.
- *** Only for use with low power modules i.e distribution amplifiers as no fans are included. Please use the RFR 5012 with fans for applications using signal processing modules. Please check with LYNX Technik if you are unsure of the chassis to use with your configuration or system design.

Specifications subject to change

Power Supplies

Modular power supplies are installed from the front of the rack. Integrated microfan and status indication LED. Hot swappable.

One (primary) power supply is included with the rack frame, a second unit (identical) can be purchased for redundant power protection.

Part **RPS 5018** - Redundant Power Supply for RFR 5014/5018

Shows rack front panel hinged open for easy access to all installed devices

(Note: RFR 5018 with fans shown, RFR 5014 is identical but without fans)

Rear Termination Panel Detail

Ordering Information

Model #	EAN	Description	Includes
RFR 5014 (N/EU/US/UK)	4250479321380	2RU Rack Frame with Primary Power Supply Please specify your required power plug when ordering (none / EU / US / UK)	Rack frame, primary power supply, chosen power plug option
RPS 5018	4250479321366	Option: Redundant Power Supply for Series 5000 Rack Frames	Power supply, no Power Cable
