**greenMachine**

greenMachine is an award-winning multi-purpose processing platform that offers many configurations in the form of constellations. Rather than being a fixed application specific box, greenMachine is a combination of general purpose hardware and constellation (pre-defined set of functionalities/features) for reprogrammable functionality and powerful control software.

**Constellations**

A constellation is a template or package of features which when deployed on a greenMachine, reconfigures that machine to have those features. Any greenMachine can be custom configured by the user using one of the pre-defined constellations, available on LYNX sales network. greenMachine is not limited to one constellation but allows switching between multiple licensed constellations to configure the machine for many different applications in the workflow.

The following constellations are currently available on greenMachine:

**HDR Evie:** An award-winning fully featured broadcast quality real-time frame by frame HDR to SDR converter, with frame sync and 4K UHD scaler supporting formats up to 4K UHD (3840x2160).

**HDR Static:** A broadcast quality HDR to SDR, SDR to HDR or cross-standard HDR to HDR converter, with a frame sync and up/down/cross converters supporting formats up to 4K UHD (3840x2160).

**4KUPXD:** A broadcast quality up/down/cross converter with frame sync and 4K UHD scaler supporting formats up to 4K UHD (3840x2160).

**3GUPXD:** A broadcast quality dual 3G up/down/cross converter and dual Scaler with frame sync supporting formats up to 3G-SDI (1920x1080).

**BIDI Transport:** A cost-effective bidirectional transport solution that allows transportation of video, audio, Ethernet, and GPI efficiently across two greenMachine Titan hardware devices.

**Testor:** A video and audio test signal generator supporting 12G (4K UHD), 3G, HD, SD-SDI formats with standard static and dynamic video test patterns with added flexibility that allows users to upload their own user-defined signal patterns.

**QuadFS:** A fully featured frame synchronizer for formats up to 3Gbit/s SDI with scaler.

Note: *greenMachine comes with an extensive audio processing capabilities. Check the cutsheet of a constellation for more details.*

**Note:** Find the information related to BIDI Transport & Testor Constellation later in this document.
One of the main goals of broadcasters and content providers is to create an immersive experience for the viewers, giving them the feeling of being part of the viewing content. The 4K standard has now been around for some time providing a high number of pixels on 4K televisions, as well as providing 4K content. Although, watching 4K content on a 4K television may not give the viewer a truly immersive experience. A large number of pixels does not determine the picture quality; color, contrast and brightness are critical too.

One key component for an immersive viewing experience is HDR - High Dynamic Range, something quite different from resolution. By preserving details in the highlights and shadows simultaneously, HDR creates a visual sensation which is close to what the human eye would capture in real scenes. In other words, HDR expands the range between white and black where brighter areas are captured and corrected without causing overexposure and yet providing detailed images. Simultaneously, darker areas are made darker without causing underexposure, yet providing most details. HDR provides much more visually satisfying pictures than simply having more pixels on the screen.

HDR is going to provide a massive change in the viewing experience for home entertainment, which will receive the same color grading experience similar to that in the cinema environment. It will not be long, due to its demand, when Broadcasters will soon adopt HDR to provide content so that viewers will enjoy an enhanced viewing experience.

Some major streaming services such as Netflix and Amazon have rolled out support for the HDR technology. HDR is end-to-end technology which means that at each step from creation to distribution to the displays, the entire workflow needs to be HDR compatible. This means that not all consumers will have an appropriate display in the near future to experience HDR content. Those without HDR screens are left with a very washed out picture. One way to solve this problem is by converting HDR content to SDR content yet keeping the best possible picture quality on the SDR screens. One way to achieve this is by using static HDR to SDR conversion which keeps the parameters for brightness, contrast and color constant throughout the production. There are HDR to SDR solutions for the post-production market, but not many options for real-time applications.

A real-time static HDR to SDR conversion works perfectly fine for the Studio environment or in an environment where the lightning conditions are predictable. However, for an outdoor environment where the lighting conditions are dynamically changing, a static HDR to SDR conversion may cause an over or under exposure. This brings us to the latest innovative process of dynamic HDR to SDR conversion for real-time content. Dynamic HDR to SDR conversion alters parameters for brightness, contrast and color dynamically for each frame in real-time to produce a vibrant and realistic image for viewers.

GMPT - HDREVIE

greenMachine titan HDR EVIE HDR > SDR Converter

The greenMachine approach is unique. The hardware itself is a powerful general purpose audio and video processing appliance that can perform many different functions using one of the available greenMachine configurations (constellations). Each constellation includes a combination of processing functions to perform high level processing including FS, UPXD, HDR etc.

The greenMachine HDR EVIE Package consist of the greenMachine titan HW and the HDR EVIE constellation.

Below you can find some basic information about the greenMachine titan.

For more information about the greenMachine titan please visit:

www.lynx-technik.com

Description

The greenMachine HDR EVIE Constellation is a fully featured broadcast quality real time frame by frame HDR to SDR converter, with a frame sync and 4K UHD scaler supporting formats up to 4K UHD (3840x2160).

The HDR EVIE Constellation must be used on the greenMachine titan 4-channel HW platform. It provides either a single 12G 4K-UHD processing channel, or four independent processing channels for SDI signals up to 1080p 3Gbit/s.

Modern image sensors offer significantly wider dynamic color ranges than classic TV devices can reproduce. The color ranges are defined as High Dynamic Range (HDR) and Standard Dynamic Range (SDR). SDR describes the older dynamic range in SD and HD-TV standards. With HDR there are completely new possibilities for broadcast and AV productions to provide an increased dynamic range for the viewer, including brighter highlights and more details in the dark areas of the image resulting in more brilliant and realistic images. One of the major challenges when introducing HDR with its tremendous image enhancements is to maintain good backward compatibility with existing SDR displays and receivers.

HDR Evie is the world’s first system using advanced algorithms which can analyze and apply optimal corrections in real time on a frame by frame bases automatically or via user controlled settings. This unique capability is unlike any solution today and is the perfect real time production tool for sports or any live broadcast event needing high quality real time HDR to SDR conversions.

Typically, HDR to SDR conversion is achieved using a single static correction for the entire production, which can be accomplished with LYNX Technik’s greenMachine HDR Static Conversion solution. This is effective for fixed, predictable applications such as TV studio production. However, for more dynamically demanding and unpredictable content, such as live sports or news broadcasts, the analysis and corrections must be adapted on a frame by frame basis to cope with challenging lighting conditions, brightness levels and image composition. Until now “frame by frame” corrections were only possible by manually applying correction metadata to each frame which is then utilized during live playback; a non-real-time process, both time consuming and expensive.

This greenMachine HDR EVIE constellation also includes spatial Up, Down and Cross conversion up to 4K UHD, audio processing and shuffling, color correction, timing adjustment, Meta Data processing and the Nova controller which enables the greenMachine to be remotely controlled and monitored via third party master control software. CustomControl is also included providing simplified customised screen panels offering direct access to user selected parameters.

[TVB Europe Best of Show Awards 2019 - Product of the Year]
The greenMachine HDR EVIE - HDR > SDR Converter Constellation consists of two individual Configurations. One for a single 12G 4K-UHD processing channel, the other for four independent 3G processing channels of SDI signals up to 3Gbit/s configuration.

When deploying this constellation, the user will be asked what configuration (4K UHD or 4x3G) he would like to deploy. The user can deploy the constellation via the greenMachine front panel or within the greenGUI running on a network connected PC or MAC. The NOVA controller is already included in the basic GM hardware.
This project (HA project no. 549/17-31) is financed with funds of LOEWE – Landes-Offensive zur Entwicklung Wissenschaftlich-ökonomischer Exzellenz, Förderlinie 3: KMU-Verbundvorhaben (State Offensive for the Development of Scientific and Economic Excellence).
greenMachine titan HDR ⇔ SDR Converter

The greenMachine approach is unique. The hardware itself is a powerful general-purpose audio and video processing appliance that can perform many different functions using one of the available greenMachine configurations (constellations). Each constellation includes a combination of processing functions to perform high level processing including FS, UPXD, HDR etc.

Description

The greenMachine HDR STATIC Constellation is a fully featured broadcast quality HDR to SDR, SDR to HDR or cross standard HDR to HDR converter, with a frame sync and up/down/cross converters supporting formats up to 4K UHD (3840x2160). The HDR STATIC applies colour and contrast parameters equally throughout a specific piece of content, i.e. an average brightness/color range is determined across an entire program.

The HDR STATIC Constellation must be used on the greenMachine titan 4-channel HW platform. It provides either a single 12G 4K-UHD processing channel, or four independent processing channels for SDI signals up to 1080p 3Gbit/s.

Modern image sensors offer significantly wider dynamic color ranges than classic TV devices can reproduce. The color ranges are defined as High Dynamic Range (HDR) and Standard Dynamic Range (SDR). SDR describes the older dynamic range in SD and HD-TV standards. With HDR there are completely new possibilities for broadcast and AV productions to provide an increased dynamic range for the viewer, including brighter highlights and more details in the dark areas of the image resulting in more brilliant and realistic images. One of the major challenges when introducing HDR with its tremendous image enhancements is to maintain good backward compatibility with existing SDR displays and receivers.

The greenMachine HDR-STATIC Constellation is a powerful tool for handling dynamic ranges and color gamuts, presenting viewers with more dynamic images than previously seen, even without an up-to-date HDR display. It provides conversion functionality, simultaneously combining it with a static (real time) tone mapping algorithm. This application allows the user to carry out up-, down- and cross-conversions between common input and output curves including Gamma, PQ, HLG and slog3 and conversions between full and narrow ranges through appropriate static tone mapping. Conversion between color spaces including Rec. 601, Rec. 709 and Rec. 2020 are also possible. HDR content can also be displayed, by contrast compression, on non HDR-capable TV monitors thus producing a high level of HDR-enhanced image quality for all possible display types.

This greenMachine HDR STATIC constellation also includes spatial Up, Down and Cross conversions up to 4K UHD, audio processing and shuffling, color correction, timing adjustment, Meta Data processing and the Nova controller which enables the greenMachine to be remotely controlled and monitored via third party master control software. CustomControl is also included providing simplified customised screen panels offering direct access to user selected parameters.
Included Features

**HDR <> SDR Conversion**
Allows for HDR to SDR, SDR to HDR and HDR to HDR conversions. Supports Gamma, PQ, HLG, and SLog3.

**4K UHD / 3G Scaler**
The Scaler is a high-quality spatial converter with powerful Region of Interest (ROI) selection and scaling.

**DeInterlacer**
The De-Interlacer will perform broadcast quality deinterlacing for incoming interlaced SD and HD video formats and applies motion adaptive filtering resulting in superb image quality. In Quad 3G mode, HDR Static provides de-interlacers on two channels.

**Frame Synchronizer**
The Frame synchronizer utilizes an external Ref. with a robust “flywheel” function for synchronization of SDI sources up to 4K UHD. All embedded audio is extracted and delayed automatically to match the video processing delay, then embedded via a matrix into the SDI output.

**3G Level A/B**
This provides automatic detection of 3G-SDI level A or Level B inputs and can convert a 3G Level A input signal (acc. to SMPTE ST425-1/4:2:2, 10 Bit) into a 3G Level B Dual Link output signal, or vice versa.

**Embedding / De-embedding**
A high quality multi-format audio embedder and de-embedder which can access all audio channels in the input SDI channel(s), shuffle and embed them in to the output(s). It can also embed DolbyE™ signals which in conjunction with the Frame Synchronizer will always maintain the guard band. It is also possible to incorporate separate AES and/or analogue audio inputs and outputs.

**Basic Audio & Video Test Generator**
The test generator is a basic audio & video test signal generator with a wide range of still video test patterns. It can be configured to work in conjunction with the Frame Synchronizer to output a test pattern on TRS errors.

**Audio Processing**
Each mono audio channel has gain adjustment, mute, inversion and stereo to mono mix-down. In addition, each mono channel has silence and overload monitoring as well as a 1 kHz test signal.

**MetaData Management**
The MetaData function manages the embedded metadata of the video signals. Time Code, Closed Captions and Teletext can be monitored and/or converted.

**Video Adjustments**
Video Adjustments include saturation, gain, black and hue adjustments, blanking interval deletion, and more.

**Color Matching**
This feature provides gain and offset adjustment for:
Red, Green, Blue, Cyan, Magenta, Yellow and Black.
This makes it the ideal tool to correct the color balance of monitors for example.

**Timing**
Each video and AES audio channel can be individually delayed. The available video delay per channel is 30 frames, the available audio delay is 1.3 seconds per AES audio channel.

**Nova Controller (included in basic GM hardware)**
This adds full SNMP v2 as well as LYNX IP remote control protocol. Mini-Nova also includes CustomControl which enables the user to design customized control panels for a computer or an iPad, giving simplified direct access to user selected parameters. CustomControl is particularly useful in live environments where instant access to a regularly used set of parameters is required without the distraction or risk of accessing all the system settings.
The greenMachine HDR STATIC - HDR <> SDR Converter Constellation consists of two individual Configurations. One for a single 12G 4K-UHD processing channel, the other for four independent 3G processing channels of SDI signals up to 3Gbit/s configuration.

When deploying this constellation, the user will be asked what configuration (4K UHD or 4x3G) he would like to deploy. The user can deploy the constellation via the greenMachine front panel or within the greenGUI running on a network connected PC or MAC.

The NOVA controller is already included in the basic GM hardware.
This project (HA project no. 549/17-31) is financed with funds of LOEWE – Landes-Offensive zur Entwicklung Wissenschaftlich-ökonomischer Exzellenz, Förderlinie 3: KMU-Verbundvorhaben (State Offensive for the Development of Scientific and Economic Excellence).
LYNX Technik has long been recognized for its feature-rich and user-friendly multi-format test signal generators through its “Testor” series. The greenMachine Testor constellation is the company’s latest offering of test signal generators and is available for the greenMachine titan hardware and greenGUI software platform. greenMachine Testor is an ideal trouble-shooting A/V tool for technicians and engineers working in the field, in-studio applications and for line-up tasks in master control rooms. Anywhere there is an A/V testing, designing, repairing and troubleshooting environment, the greenMachine Testor will be useful.

The greenMachine Testor constellation is a video and audio test signal generator that comes pre-configured for the greenMachine titan platform. It supports 12G (4K UHD), 3G, HD, SD-SDI formats and when operating in UHD mode, the Testor constellation can provide a single channel test generator. For 3G video formats (and below) the Testor constellation offers four independent test generators. To summarize the two options, it is currently offered in two configurations:

1. Single Channel 4K/UHD (up to 3840 x 2160p) - 12Gbit/s SDI and quad link (2SI)
2. Four independent channels up to 3G SDI

Standard static and dynamic video test signals and patterns are included, and for added flexibility, users can upload their own user-defined signal patterns. Logos and text can also be added to the test signals, which is very useful for example for channel identification. The included collection of patterns supports all video standards up to 4K/UHD. User-defined pattern uploads can be resampled for other standards. The Testor constellation also offers test signals for various HDR standards (PQ, HLG, SLog3). Plus, the full collection of test signals can be shared with all greenMachine devices in a network (greenUniverse).

The integrated graphics editor provides a tool for users to place images & logos, add text, and even add user-defined signal patterns and graphics. All items can be moved and edited simply with a computer mouse. A scaler ensures users can scale test patterns to match the format.

The greenGUI software provides users with a true, advanced preview interface (including zoom) to check test signals in the GUI, control the outputs, format the settings, and manage customer-defined image and test pattern uploads. greenGUI software is free of charge and can be downloaded from: https://www.lynx-technik.com/support/download-area/greengui-software/

The greenMachine Testor also includes a 16-channel audio test generator with adjustable level, phase, frequency, mix-down and an EBU/AV sequence. All the audio measures are embedded into the SDI video or output to the external audio outputs of greenMachine. Through the audio crossbar all audio generator channels can be individually assigned to the embedder inputs and the external audio outputs (AES or analog). The timing of the audio and the video test signals including the output reference signal (Bi-level SD or Tri-Level HD) can be individually set in relation to an attached input reference signal.
The greenMachine TESTOR Constellation consists of two individual configurations. One for a single 12G 4K-UHD processing channel, the other for four independent 3G processing channels of SDI signals up to 3Gbit/s configuration.

When deploying this constellation, the user will be asked what configuration (4K UHD or 4x3G) he would like to deploy. The user can deploy the constellation via the greenMachine front panel or within the greenGUI running on a network connected PC or MAC.

The NOVA controller is already included in the basic GM hardware.

Functional Diagram Quad 3G Channel
The greenMachine 4K UPXD Package consist of the greenMachine titan HW and the 4K UPXD constellation.

Below you can find some basic information about the greenMachine titan.

For more information about the greenMachine titan please visit:

www.lynx-technik.com

Description

The greenMachine 4K Up/Down/Cross Converter Constellation is a fully featured broadcast quality up/down/cross converter supporting formats up to 4K UHD (3840x2160). This constellation can be used on the greenMachine titan HW platform.

This constellation is designed for applications that require dependable broadcast quality up/down/cross conversion and frame synchronization with full audio processing capability. The converter includes powerful scaling capabilities that allow a versatile Region of Interest (ROI) selection. The included 3G Level A/B and 3G Deinterlacer makes the greenMachine titan compatible with either SDI standard up to 3G (Level A or Level B).

The module also supports 4x3G SDI (2SI Quad Link) or 12G SDI (Single Link) input and outputs for 4K UHD signals. With the 2SI Quad-Link<>Single-Link Conversion signals can be interchanged in between the single link and 2SI quad link.

The extensive audio processing capability de-embeds all audio as well as providing support for one MADI input and output and four external audio inputs or outputs which individually can be configured to be analog (balanced) or digital (AES) interfaces. Multiple internal crossbars allow for extensive audio shuffling including the MADI streams. It also provides two Dolby E® decoders, Dolby E® synchronization, full audio processing as well as multiple adjustable user delays for audio and video.

The greenMachine titan hardware comes with a fully featured local control interface with an LCD which displays image previews and audio level meters of the processed video paths in addition to the graphical user interface.

This greenMachine 4k UPXD constellation is also supported by the Nova controller which enables the module to be remotely controlled and monitored via third party master control software.

The De-Interlacer will perform broadcast quality deinterlacing for incoming interlaced SD and HD video formats and applies motion adaptive filtering resulting in superb image quality.

**Frame Synchronizer**
The Frame synchronizer utilises an external Ref., with a robust “flywheel” function for synchronization of SDI sources up to 4K UHD. All embedded audio is extracted and delayed automatically to match the video processing delay, then embedded via a matrix into the SDI output.

**3G Level A/B**
This provides automatic detection of 3G-SDI level A or Level B inputs and can convert a 3G Level A input signal (acc. to SMPTE ST425-1/4:2:2, 10 Bit) into a 3G Level B Dual Link output signal, or vice versa.

**Embedding / De-embedding**
A high-quality multi-format audio embedder and de-embedder which can access all audio channels in the input SDI channel(s), shuffle and embed them in to the output(s). It can also embed DolbyE™ signals which in conjunction with the Frame Synchronizer will always maintain the guard band. It is also possible to incorporate separate AES and/or analogue audio inputs and outputs.

**Basic Audio & Video Test Generator**
The test generator is a basic audio & video test signal generator with a wide range of still video test patterns. It can be configured to work in conjunction with the Frame Synchronizer to output a test pattern on TRS errors.

**Audio Processing**
Each mono audio channel has gain adjustment, mute, inversion and stereo to mono mix-down. In addition, each mono channel has silence and overload monitoring as well as a 1 kHz test signal.

**Dolby E® Decoder**
Two Dolby E® Decoder can be used to decode all 8 audio channels contained in a Dolby E® stream. The Dolby® metadata can be mapped to VANC acc. to SMPTE 2020-3 and SMPTE 2020-2.

**MADI In/Out**
This provides a MADI input and output. All incoming MADI signals are routed to the internal audio crossbar. The outgoing MADI signal can be completely re-arranged in the internal audio crossbar.

**MetaData Management**
The MetaData function manages the embedded metadata of the video signals. Time Code, Closed Captions and Teletext can be monitored and/or converted.

**Video Adjustments**
Video Adjustments include saturation, gain, black and hue adjustments, blanking interval deletion, and more.

**Color Matching**
This feature provides gain and offset adjustment for: Red, Green, Blue, Cyan, Magenta, Yellow and Black. This makes it the ideal tool to correct the color balance of monitors for example.

**Timing**
Each video and AES audio channel can be individually delayed. The available video delay per channel is 30 frames, the available audio delay is 1.3 seconds per AES audio channel.

**Nova Controller (included in basic GM Hardware)**
This adds full SNMP v2 as well as LYNX IP remote control protocol. Mini-Nova also includes CustomControl which enables the user to design customized control panels for a computer or an iPad, giving simplified direct access to user selected parameters. CustomControl is particularly useful in live environments where instant access to a regularly used set of parameters is required without the distraction or risk of accessing all the system settings.

Package

Dual 3G Up/Down/Cross Converter + Dual Scaler for greenMachine titan

The greenMachine approach is unique. The hardware itself is a powerful general purpose audio and video processing appliance that can perform many different functions using one of the available greenMachine configurations (constellations). Each constellation includes a combination of processing functions to perform high level processing including FS, UPXD, HDR etc.

Description

The UPXD 3G constellation is a broadcast quality video processing unit having quad channel up/down/cross converter with frame synchronizer supporting formats up to 3G-SDI (1920 x 1080) per channel. This constellation is designed for applications that require dependable broadcast quality up/down/cross conversion and frame synchronization with full audio processing capability. The included scalers allow for spatial conversions of the video signals including a versatile Region of Interest (ROI) selection. High-performance deinterlacers are also provided for two of the processing channels for the conversion of interlaced video signals.

A bi-level SD reference signal, as well as a tri-level HD reference signal, can be used to synchronize the video signals. A timed reference output (SD or HD) is also provided. Input for processing and the output, both can be BNC, Fiber or HDMI. Multiple additional processing features allow for adjustments of the video content: gain, hue, etc. A basic test pattern generator is also available per channel providing the most common line & fill patterns like color bars, pathological test patterns, full filed colors, etc.

The extensive audio processing capability de-embeds all audio as well as providing support for one MADI input and output and four external audio inputs or outputs which individually can be configured to be analog (balanced) or digital (AES) interfaces. Multiple internal crossbars allow for extensive audio shuffling including the MADI streams. It also provides two Dolby E® decoders, Dolby E® synchronization, full audio processing as well as multiple adjustable user delays for audio and video.

The greenMachine Dual 3G UP/Down/Crossconverter + Dual Scaler Constellation is for deployment on the greenMachine titan HW platform. Below you can find some basic information about the greenMachine titan.

greenMachine titan 4x3Gbit/s Framesynchronizer

The greenMachine approach is unique. The hardware itself is a powerful general-purpose audio and video processing appliance that can perform many different functions using one of the available greenMachine configurations (constellations). Each constellation includes a combination of processing functions to perform high level processing including FS, UPXD, HDR etc.

Description

The greenMachine 4x3Gbit/s Framesynchronizer Constellation is a fully featured video frame synchronizer for formats up to 3Gbit/s SDI. This constellation can be used on the greenMachine titan HW platform.

This constellation is designed for applications that require dependable broadcast quality frame synchronization with full audio processing capability. The included scaler allows for spatial conversions of the video signal including a versatile Region of Interest (ROI) selection. A bi-level SD reference signal as well as a tri-level HD reference signal can be used to synchronize the video signals. A timed reference output (SD or HD) is also provided.

Input for processing can be BNC, Fiber or HDMI. Output can also be BNC, Fiber or HDMI (optional fiber SFPs ordered seperately).

Multiple additional processing features allows for adjustments of the video content, e.g. gain, hue etc. A basic test pattern generator is also available per channel providing the most common line & full field patterns like color bars, pathological test pattern, full field colors etc.

The extensive audio processing capability de-embeds all audio as well as providing support for one MADI input and output and four external audio inputs or outputs which individually can be configured to be analog (balanced) or digital (AES) interfaces. Multiple internal crossbars allow for extensive audio shuffling including the MADI streams. It also provides two Dolby E® decoders, Dolby E® synchronization, full audio processing as well as multiple adjustable user delays for audio and video.

The greenMachine titan hardware comes with a fully featured local control interface with an LCD which displays image previews and audio level meters of the processed video paths in addition to the graphical user interface.

This greenMachine 4k UPXD constellation also includes the Nova controller which enables the module to be remotely controlled and monitored via third party master control software.

The greenMachine Quad Framesynchronizer Package consist of the greenMachine titan HW and the Quad Frame Synchronizer constellation.

Below you can find some basic information about the greenMachine titan.

For more information about the greenMachine titan please visit:

www.lynx-technik.com
### Included Features

**3G Scaler**
The Scaler is a high-quality spatial converter with powerful Region of Interest (ROI) selection and scaling. One scaler per video channel is provided.

**Frame Synchronizer**
The Frame synchronizer utilizes an external Ref. with a robust "flywheel" function for synchronization of SDI sources up to 3G-SDI. All embedded audio is extracted and delayed automatically to match the video processing delay, then embedded via a matrix into the SDI output.

**3G Level A/B**
This provides automatic detection of 3G-SDI level A or Level B inputs and can convert a 3G Level A input signal (acc. to SMPTE ST425-1/4:2:2, 10 Bit) into a 3G Level B Dual Link output signal, or vice versa.

**Embedding / De-embedding**
Four high quality multi-format audio embedder and de-embedders which can access all audio channels in the input SDI channel(s), shuffle and embed them in to the output(s). It can also embed DolbyE™ signals which in conjunction with the Frame Synchronizer will always maintain the guard band. It is also possible to incorporate separate AES and/or analogue audio inputs and outputs.

**Basic Audio & Video Test Generator**
The test generator (one per video channel) is a basic audio & video test signal generator with a wide range of still video test patterns. It can be configured to work in conjunction with the Frame Synchronizer to output a test pattern on TRS errors.

**Audio Processing**
Each mono audio channel has gain adjustment, mute, inversion and stereo to mono mix-down. In addition, each mono channel has silence and overload monitoring as well as a 1 kHz test signal.

**Dolby E® Decoder**
Two Dolby E® Decoders can be used to decode all 8 audio channels contained in a Dolby E® stream. The Dolby E® metadata can be mapped to VANC acc. to SMPTE 2020-3 and SMPTE 2020-2.

**MADI In/Out**
This provides a MADI input and output. All incoming MADI signals are routed to the internal audio crossbar. The outgoing MADI signal can be completely re-arranged in the internal audio crossbar.

**MetaData Management**
The MetaData function manages the embedded metadata of the video signals. Time Code, Closed Captions and Teletext can be monitored and/or converted.

**Video Adjustments**
Video Adjustments include saturation, gain, black and hue adjustments, blanking interval deletion, and more.

**Color Matching**
This feature provides for each video channel gain and offset adjustment for: Red, Green, Blue, Cyan, Magenta, Yellow and Black. This makes it the ideal tool to correct the color balance of monitors for example.

**Timing**
Each video and AES audio channel can be individually delayed. The available video delay per channel is 30 frames, the available audio delay is 1.3 seconds per AES audio channel.

**Nova Controller (included in basic GM hardware)**
This adds full SNMP v2 as well as LYNX IP remote control protocol. Mini-Nova also includes CustomControl which enables the user to design customized control panels for a computer or an iPad, giving simplified direct access to user selected parameters. CustomControl is particularly useful in live environments where instant access to a regularly used set of parameters is required without the distraction or risk of accessing all the system settings.
Bi-directional Transport for greenMachine® titan

Features

- Multi-signal bidirectional transport solution through bi-directional 12G SDI channel
- SDI, HDMI and Optical inputs and outputs
- 4x Audio transport in both directions
- 4x GPIO in both directions
- 1x Serial I/O (UART)
- 1x 1Gbit Ethernet transport
- 4 Audio inputs and outputs switchable between analog and digital
- 1x MADI via optical (3G)
- Included transceivers and bidirectional SFP modules for full signal transport
- Timed reference output
- Integrated local control panel for configuration and monitoring
- Extensive monitoring features such as image previews and audio level meters available on the local control panel and control software
- Full remote control using greenGUI control software
- CustomControl Panels
- Full SNMP v2 support
- Optional video and Ethernet CWDM fiber I/O with all 18 wavelengths selectable
- Optional redundant power protection
- Optional 19" rack frame

Description

The BIDI Transport constellation is a cost-effective bidirectional transport solution that allows transportation of video, audio, Ethernet, and GPI efficiently across two greenMachine Titan hardware devices. It is a flexible solution for applications that require an exchange of multiple signals consisting of video, audio, and GPIs, on two single fiber links over long distance. The Ethernet control information can be transported over a single fiber link over bidirectional SFPs. A Master/Slave model of communication is used between the two greenMachine Titan hardware devices where one machine will act as a Master device while the other will be a Slave.

Six HD signals (1.485Gbit/s) or four 3G signals (2.97Gbit/s), one 12G Signal (12 Gbit/s), or combination of signals up to 12Gbit/s, 4 external analog or digital Audio Signals and four GPIs can be transported via the fiber ports in both directions, simultaneously. The reference of one of the two greenMachines (aka the Master) is also transmitted to the other greenMachine (aka the Slave) and can be used in the remote location to synchronize cameras, as an example. A 1Gbit ethernet transport link provides easy control of the two greenMachine via greenGUI software.

For the signal transport to occur which consists of video, audio, and GPIs, the two greenMachine Titans need to be connected via two single-mode fiber cables over transceiver SFPs. For the Ethernet control signal transmission, one single-mode fiber cable is required over bidirectional SFPs.

The greenMachine titan hardware comes with a fully featured local control interface with an LCD which displays image previews and audio level meters of the processed video paths in addition to the graphical user interface.

Get the full story at www.green-machine.com
For more details and to see the complete portfolio of greenMachine constellations, please visit:
www.green-machine.com
### Features

- **4x 3G or 1x 4K/UHD general purpose AV processing appliance**
- **Internal input and output signal routers**
- **Compatible with all available greenMachine constellations**
- **Integrated control panel with color display for live image monitoring, audio level meters, status indication and menu driven control interface**
- **Small footprint: 1RU high x half 19” rack width**
- **3x electrical SD/HD/3G SDI inputs. Level A and Level B DL**
- **3x electrical SD/HD/3G SDI outputs. Level A and Level B DL**
- **1x electrical SD/HD/3G/12G SDI Input. 12G Single Link / Quad Link 2SI Level A / BDL**
- **1x electrical SD/HD/3G/12G SDI Output. 12G Single Link / Quad Link 2SI Level A / BDL**
- **1x 4K/UHD HDMI input (1.4b) and 1x 4K/UHD HDMI output (1.4b): 4K 50/59.94/60Hz signals will be displayed in 4:2:0 color subsampling**
- **1x Analog reference input and output (bi-level or tri-level sync)**
- **1x Electrical LAN I/O connection**
- **4x Balanced analog audio or digital AES Audio inputs**
- **4x Balanced analog audio or digital AES Audio outputs**
- **4x GPI inputs and 4x GPI outputs**
- **1x Optional SDI fiber I/O (basic fiber or CWDM): SD/HD/3G**
- **1x Optional 12G SDI fiber I/O (basic fiber or CWDM): HD up to 12G**
- **1x Optional Ethernet LAN fiber connection (basic or CWDM)**
- **Optional redundant power protection**
- **Optional 19” rack frame**
- **Nova controller included: Full remote control using greenGUI control software**
- **Full SNMP V2 support**

### Description

The greenMachine approach is unique. The hardware itself is a powerful general-purpose audio and video processing appliance that can perform many different functions using one of the available greenMachine configurations (constellations), i.e. FS, UPXD, HDR etc. The user can select and license just the constellation, or multiple constellations required at the point of order and can switch between these licenced constellations at any time. Additionally, they may purchase licences for additional constellations in the future. As all constellations are pre-installed, un-licensed constellations can be deployed for testing and proof of system concept but will show watermarks at the outputs.

The greenMachine titan platform provides for simultaneous processing of up to four individual SD/HD/3G SDI signals or a single 4K/UHD SDI signal.

Input for 4K/UHD can be either 4x 3G SDI (2SI Quad Link) or 12G SDI (Single Link). Conversion between Single Link 12G SDI and 2SI Quad link signals (and vice versa) is included in the 4K/UHD constellations. Fibre SFP options are available for one SD/HD/3G SDI and one 12G 4K/UHD input and output.

The Nova controller (full remote control) is included in the basic framework.

### Constellations

(Examples only - many more are available - please ask your local LYNX representative)

- **GMC-Quad3G-FS**
  - **Quad 3G Frame Synchronizer**
  - This utilizes robust “flywheel” synchronization that will accommodate a wide variety of low quality asynchronous SDI sources. All embedded audio is extracted and delayed automatically to match the video processing delay. Audio is free from disturbances even when dropping and adding frames...

- **GMC-4K-UPXD**
  - **4K/UHD Up/Down Cross Converter**
  - A broadcast quality 4K/UHD Up/Down/Cross converter that provides a multitude of conversion and scaling possibilities. The powerful input cropping functionality enables a full Region of Interest (ROI) selection and in addition, the output image size can be adjusted...

- **GMC-TESTOR-titan**
  - **4K/UHD or 4x3G Audio & Video Test Generator**
  - This provides a powerful audio & video test generator for a single 4K/UHD channel or 4 channels of up to 3G SDI. A wide range of test patterns are available pre-installed, but the user can easily load own test patterns or images through the greenGUI...

Connections

Specifications

SDI Inputs
3x 3G SDI video on 75 Ohm BNC connector - SMPTE, 292M, 424M, 259M
with automatic video format and standard detection
Return Loss: >15dB from 5MHz to 1.5GHz; >10dB from 1.5GHz to 3GHz

Automatic cable EQ (Belden 1694A): 340m@270Mbit/s, 150m@1.5Gbit/s, 110m@2.97Gbit/s

12G SDI Input
1x 12G SDI video on 75 Ohm BNC connector - SMPTE 292M, 424M, 259M, 2081, 2082
with automatic video format and standard detection
Return Loss: same as 3G SDI; >78dB to 6GHz; >48dB to 12GHz

HDMI Input / Output
1x 10 bit HDMI 4K/UHD 1.4b

Optical I/O (Optional)
1x 3G-SDI SFP Transceiver (SMPTE 297M - 2006)
1x 12G-SDI SFP Transceiver (SMPTE 292M, 424M, 2081, 2082) - no SD SDI (270Mbit)

Ethernet (LAN)
1x 10/100/1000 BaseT RJ45 Connector

GPI / I/O
4x general purpose inputs + 4x general purpose outputs - RJ45 Connectors

Reference Input
1x analog video reference on 75 Ohm BNC connector

Analog bi-level (SDTV) or tri-level (HDTV), cross lock capability

SDI Output
3x SDI video on 75 Ohm BNC connector (SMPTE, 292M, 424M, 259M)
Timing jitter: < 0.2 UI @ 270Mbit/s, < 1.0 UI @ 1.5Gbit/s, < 2.0 UI @ 2.97Gbit/s
Alignment jitter: < 0.2 UI @ 270Mbit/s, < 0.2 UI @ 1.5Gbit/s, < 0.3 UI @ 2.97Gbit/s
Return Loss: >15dB from 5MHz to 1.5GHz; >10dB from 1.5GHz to 3GHz

12G SDI Output
1x 12G SDI video on 75 Ohm BNC connector - SMPTE 292M, 424M, 259M, 2081, 2082
Return Loss: same as 3G SDI; >78dB to 6GHz; >48dB to 12GHz

Serial Data
EIA/ETC RS232C / RS422 / RS 485 selectable through greenGUI - RJ45 connector
Quad protection for up to 15V

Reference Output
1x analog video reference on 75 Ohm BNC connector

Audio I/O
4x input and 4x output on Sub-D 25 female connector

Analog I/O: input impedance >10k Ohm, Output Impedance 150 Ohm

Digital I/O: AES3 balanced transformer isolated, Digital output level: 4V peak to peak norm

Supported SDI Formats

SDTV Formats
525 / 59.94Hz
525 / 60Hz

HDTV Formats
1039i / 50Hz
1039i / 59.94Hz
1039i / 60Hz
1080p / 23.98Hz
1080p / 24Hz
1080p / 25Hz
1080p / 50Hz
1080p / 59.94Hz
1080p / 59.94Hz
1080p / 60Hz

3GBit/s Formats
Level A and B
1039i / 50Hz
1039i / 59.94Hz
1039i / 60Hz

12GBit/s Formats
Single Link
3840 x 2160p / 50Hz
3840 x 2160p / 59.94Hz
3840 x 2160p / 60Hz

Quad Link 2SI
3840 x 2160p / 50Hz
3840 x 2160p / 59.94Hz
3840 x 2160p / 60Hz

12GBit/s Formats
Level A and B
3840 x 2160p / 50Hz
3840 x 2160p / 59.94Hz
3840 x 2160p / 60Hz

3GBit/s Formats
Level A and B
4K / 50Hz
4K / 59.94Hz
4K / 60Hz

Power
12VDC @ 45W normal (supports 7 - 24VDC input range)
2x power connections for redundant power supply

Mechanical
W: 218mm (1/2 19”), H: 44mm (1.75”), D: 225mm (8.86”) - including connectors.
Weight: 1.4kg (3.09lb)

Ambient
Temperature: 5°C to 40°C (41°F to 104°F) maintaining specification
Humidity: 90% maximum, non-condensing

Model #
GM 6840 EU - (EAN# 4250479325050)
GM 6840 UK - (EAN# 4250479325067)
GM 6840 US - (EAN# 4250479325074)

Includes
greenMachine, primary power supply and AC power cord, SubD 25 audio adapter PCB and quick reference guide (constellations not included - purchased separately)
 Options

RFR 6000 - 1RU 19” Rack Mount Chassis

Rack mounting hardware which can accommodate one or two greenMachines in 1RU of rack space which also securely mounts the power supplies. Note: two power supplies can be mounted onto one RFR 6000. Please see more information in the RFR 6000 quick reference guide.

RPS 6120 - Redundant Power Supply

A second external in line power supply for redundant power protection.

Fiber Options

The titan is equipped with three SFP sockets which can accommodate a variety of plug in SFP fiber I/O options. Two sockets are for SDI connectivity and the other is for Ethernet. Fiber options can be added at any time.

greenMachine RFR 6000
19” Rack Frame for 1 or 2 greenMachines

Features

- Compact 1 RU design
- Accommodates one or two greenMachines
- Innovative mounting for up to two RPS6120 power supplies
- Rack position adjustable to Recessed, Flush or Protruded

Description

The greenMachines are ideally suited for standalone applications but these powerful processing platforms reach their full potential when used within a system design.

The RFR 6000 is a compact and flexible rack mounting solution. It can be setup to hold up to two greenMachines. Regardless which setup, the RFR 6000 also provides an innovative mounting solution for two RPS6120 power supplies.
