

LYNXTechnik AG | Broadcast Television Equipment

LYNX Technik AG designs and manufactures signal processing solutions for broadcast, post production and professional audio visual markets. It is an independent and privately owned company with its headquarters, R&D and manufacturing based in Weiterstadt, Germany. Global sales and support is provided from its headquarters in Germany and via regional hubs located in USA (California), and Asia Pacific (Singapore).

All products are manufactured in Germany.

LYNX Technik was founded in 2003 and has since earned the confidence of broadcasters, production, post production, outside broadcasters, events producers, houses of worship, and government facilities throughout the world. LYNX Technik products are used daily in thousands of “mission critical” broadcast and AV applications and are trusted to perform and deliver.

LYNX Technik and its various product brands have become synonymous with innovation, high quality, reliability and ease of use.

LYNX Technik always explores new product concepts in close cooperation with major broadcasters and key customers worldwide to help specify features and functionality and set performance goals. This ensures LYNX Technik products address real market applications with the highest quality solutions at reasonable prices.

LYNXTechnik AG - Product Lines and Brands

greenMachine[®]

A completely new concept adopting a three prong approach to product definition and function, which includes general purpose hardware, function specific APPs and control software. Rather than being a traditional fixed "application specific" box, greenMachine is 100% APP driven...add or remove functionality at any given time. This provides a customizable approach to functionality that offers true flexibility and future-proofing in today's rapidly changing industry.

yellobrik[®]

A wide range of "brick-style" modules that offer a variety of solutions including distribution, conversion, frame synchronization, embedding / de-embedding. yellobrik also includes a complete range of fiber solutions for SDI, Ethernet, RS232/422/485 and GPI. Fiber solutions also include CWDM options as well as passive optical splitters and optical combiners. yellobrik's can be used as throw down modules or as part of a fully integrated system using the yellobrik rack mount chassis.

Testor | lite 3G[™]

A low cost, compact multi-standard SDI battery powered test signal generator. It is widely used by broadcasters, field engineers, and post production facilities around the world to trouble-shoot and monitor video and audio signals.

Series | 5000[™]

A traditional rack and card-based modular interface solution that can be configured with any mix of modules from an extensive portfolio. Solutions include; converters, distribution amplifiers, embedders / de-embedders, frame synchronizers, audio delay, audio distribution, test signal generators, multiplexers / demultiplexers, splitters, switches and a full range of fiber options (including CWDM) & accessories.

APPolo[™] | Control System

A powerful yet simple software solution for remote control, status monitoring and error reporting of all connected LYNX Technik Series 5000 hardware within one centralized system. APPolo offers a unique user experience through its flexGUI, an intuitive graphic user interface that offers a simple way to visualize and control Series 5000 modules through path highlighting, interactive zoom, and signal routing. APPolo includes several robust features including: AutoControl, an automation element and CustomControl which integrates simple drag-and-drop controls for creating a custom user interface within a system which can be deployed over a network or wireless to IPads.
