

Reference Manual Version 2.0 C AD 5132

YUV/YC to SDI Converter & Frame Synchronizer

series 5000 CarolModule

Information in this document is subject to change without notice. No part of this document may be reproduced or transmitted in any form or by any means, electronic or mechanical for any purpose, without express written permission of LYNX Technik AG.

LYNX Technik AG may have patents, patent applications, trademarks, copyrights or other intellectual property rights covering the subject matter in this document. Except as expressly written by LYNX Technik AG, the furnishing of this document does not give you any license to patents, trademarks, copyrights or other intellectual property of LYNX Technik AG or any of its affiliates.

© LYNX Technik AG 2005-2009 all rights reserved

Warranty

LYNX Technik AG warrants that the product will be free from defects in materials and workmanship for a period of two (2) year from the date of shipment. If this product proves defective during the warranty period, LYNX Technik AG at its option will either repair the defective product without charge for parts and labor, or will provide a replacement in exchange for the defective product.

In order to obtain service under this warranty, customer must notify LYNX Technik of the defect before expiration of the warranty period and make suitable arrangements for the performance of service. Customer shall be responsible for packaging and shipping the defective product to the service center designated by LYNX Technik, with shipping charges prepaid. LYNX Technik shall pay for the return of the product to the customer if the shipment is within the country which the LYNX Technik service center is located. Customer shall be responsible for payment of all shipping charges, duties, taxes and any other charges for products returned to any other locations.

This warranty shall not apply to any defect, failure, or damage caused by improper use or improper or inadequate maintenance and care. LYNX Technik shall not be obligated to furnish service under this warranty a) to repair damage resulting from attempts by personnel other than LYNX Technik representatives to install, repair or service the product; b) to repair damage resulting from improper use or connection to incompatible equipment; c) to repair any damage or malfunction caused by the use of non LYNX Technik supplies; or d) to service a product which has been modified or integrated with other products when the effect of such modification or integration increases the time or difficulty servicing the product.

THIS WARRANTY IS GIVEN BY LYNX TECHNIK WITH RESPECT TO THIS PRODUCT IN LIEU OF ANY OTHER WARRANTIES, EXPRESS OR IMPLIED. LYNX TECHNIK AND ITS VENDORS DISCLAIM ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. LYNX TECHNIK'S RESPONISIBILITY TO REPAIR AND REPLACE DEFECTIVE PRODUCTS IS THE SOLE AND EXCLUSIVE REMEDY PROVIDED TO THE CUSTOMER FOR BREACH OF THIS WARRANTY. LYNX TECHNIK AND ITS VENDORS WILL NOT BE LIABLE FOR ANY INDIRECT, SPECIAL, INCIDENTIAL, OR CONSEQUENTIAL DAMAGES IRRESPECTIVE OF WHETHER LYNX TECHNIK OR THE VENDOR HAS ADVANCE NOTICE OF THE POSSIBILITY OF SUCH DAMAGES.

Regulatory information Europe Declaration of Conformity

USA

FCC 47 Part 15

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Note: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to the part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense

Getting Started

Packaging

The shipping carton and packaging materials provide protection for the module during transit. Please retain the shipping cartons in case subsequent shipping of the product becomes necessary.

Product Description

The C AD 5132 is a high performance 12 Bit Video A/D Converter for analog composite and component signals (CVBS, YUV, YC) and is designed primarily for broadcast and professional applications.

One out of two input signals can be selected. The input architecture is differential to assure optimal resistance against distortion. Automatic Gain Control is integrated into the input stage. 625/525 Input detection is automatic. Either an external loop-through reference or the internal rack reference (black burst signal) can be used to frame or line-synchronize the SDI output.

The C AD 5132 features a wide range of available adjustments (via optional Rack Controller). Basic adjustments are possible using via the local multifunction switch and integrated display.

CardModules are installed in the series 5000 card frame that can accommodate up to 10 CardModules. All modules are hot swappable and Options include full redundant power and a range of controller options.

Functional Diagram

Figure 1 below is the basic functional diagram for the C AD 5132 CardModule.

Figure 1- C AD 5132 Functional Diagram

Module Layout

Figure 2 shows the physical layout of the C AD 5132 CardModule and also the connection panel which is fitted to the rear of the rack.

Caution

Use static precautions when handling the PCB. Static discharge could result in serious damage to the module.

Connections

Video Connections

The C AD 5132 CardModule is configured with standard 75 Ohm BNC connectors. Connection is self-explanatory. We recommend the use of high quality video cable for digital video connections to reduce the risk of interference or errors due to excessive cable attenuation. Some guidelines for max cable length are shown below.

250m (820 feet) Belden 8281 (270Mbits/s)

Note. Due to the compact design of the connection plate it will be necessary to use a connection tool to secure the BNC video connectors.

Installation

Caution

The CardModule is shipped in a protective anti-static bag. Please take suitable precautions to avoid static discharge onto any part of the PCB or components when handling module or serious damage could result.

Each Card Module is supplied with a rear connection panel and two mounting screws. Please follow the following procedure for installation of the card module into the Series 5000 Card Frame.

- a) Select a slot in the card frame where the CardModule will be located
- b) Remove the blank connection panel from the rear of the rack (if fitted)
- c) Install the rear connection panel using the screws supplied. Do not tighten the screws fully
- d) Slide the card module into the card frame and carefully check the CardModule easily connects to the rear connection plate. The card should fit easily and should not require excessive force to insert, if you feel any resistance, there could be something wrong with the rear connection panel location. Do not try and force the connection. Remove the rear connection panel and check alignment with the CardModule.
- e) Insert and remove the CardModule a few times to ensure correct alignment and then tighten the two screws to secure the rear connection plate

Settings and Control

The C AD 5132 has an integrated micro-controller, which enables the module to be configured and controlled locally using the multifunction switch and 4 character dot matrix display, or from remote when using one of the optional controllers and control software.

Once set, all settings are automatically saved in non-volatile internal memory. (Flash ram) The module will always recall the settings used prior to power down.

PCB Front View

Multi Function Switch

The CardModule is equipped with a multi-function switch located on the front bottom edge of the card (refer to figure 3)

Multi-function Switch

Using the Local Display Menus

Making local adjustments to the module is done using the multifunction switch and the integrated 4character dot matrix display (figure 3). The menu system is layered, and navigation through the system is done using the **UP** and **DOWN** functions of the switch. **ENTER** is used to move between menu levels and also enter a selection.

Navigation

Switch Function	Operation
UP	Move UP within a level
DOWN	Move down within a level
ENTER	Change levels / Make selection

Local Adjustments Available

All of the critical adjustments to the module are accessible using the local display and multi function switch, these include:

- Input Signal A/B select
- External / Rack Internal sync reference select
- Frame or Line Synchronizer Mode
- Genlock mode
- Luma-/ chroma filter settings
- Auto-/ manual gain control
- CTI (Color Transition Improvement)
- Test signal select

A set of extended adjustments is possible when using a controller option and LYNX control software. Adjustments (in addition to the basic adjustments above) include:

- Adjustable Luma / chroma filters
- Adjustable Coring function
- Adjustable Contrast, Saturation, Brightness and Hue
- Automatic Gain Control mode reference
 select

Menu Structure

The Menu structure is defined in the next table, and should be used when navigating through the system.

Notes / Tips.

ENTER moves between Levels

UP/DOWN moves between items within the level

When you enter a new setting the system will jump back one level in the menu system.

The "back" selection in the menu structure will take you back one level when selected.

When an item is selected which has several setting possibilities the first value displayed will be the value currently stored in the system. The order of the available settings for any menu item in the table supplied does not represent the order he settings will actually be displayed.

If left unattended, the menu will default to the root display after a preset timeout.

Factory Preset Condition

The C DA 5132 is delivered programmed and preset for the following mode of operation:

Input Angelere Filter	Input 1
Analog Filter	FLAT
Genlock	HIQ
Reference	Internal (Rack Reference)
Mode	Frame Synchronizer
Fame Delay	0000
Line delay	0000
Pixel delay	0000
Lum filter	LP 18 (5,5 MHz)
Chroma filter	1.8 MHz
VBI	PROC (processed)
CTI	OFF
AGC Lum	Auto
AGC Col	Auto
Hue, Pedestal	0
Chroma, Gain	128
Test Signal	Bars
Test Signal Standard	Auto

If this is the mode of operation required, then no adjustments are necessary.

These settings can be recalled at any time by selecting reset from the menu system.

Auto Store

If no parameters are changed for 10 seconds then the current settings will be written into flash memory automatically, this can be seen by the alarm LED flashing yellow four times.

Test signal output if no input

The C AD 5132 provides a set of test signals (color bars, colors over red field, black, pathological PLL/EQ). This can be activated in normal operation.

If no input signal is available a blue screen will be activated on the output. This can be deactivated with the LYNX C3_local SW. Then the last selected test signal will be activated on the output if no input is applied.

Audio Delay Pulse

The Audio Delay Pulse is connected through a BNC connector with TTL levels and needs 75 Ohm termination.

Min. Delay in Frame Synch Mode is 1 Frame Min. Delay in Line Synch Mode is < 1µs

Alarm/LED Status Indicators

The C AD 5132 module has integral LED indicators, which serve as alarm and status indication for the module. Function is described below.

Status Indicators

3 status LED's are provided on the front edge of the module, LED 1, LED 2, LED 4 (figure 2)

LED	Color	Indication
1	Green	Input Present
I.	Red	No Input
	Green	PLL locked (Video and Ref)
2	Yellow	Video PLL Locked, Ref PLL unlocked
	Red	PLL unlocked
4	Green	525 Mode
	Yellow	625 mode

Alarm Indicator

There is also a single alarm LED on the lower edge of the module LED 3. This is visible through the card frame front cover and provides a general indication of the module status.

LED Color	Indication
Green	Signal present and PLL locked
Yellow	Test Signal Selected
Red	No input signal, PLL unlocked

LED **OFF** indicates power is lost, or there is a power supply fault.

Locate Function

For larger systems which may have multiple cards of the same type in a single rack, or multiple rack systems on a large central control system we have added a useful utility which will help to visually locate a suspect module quickly (When used in conjunction with the optional control system and software)

Once the specific module has been selected on the control system there is a locate button on the top of the GUI:

Commands	Status
Locate	🔵 ок
Restore Factory Defaults	

Locate Function in Control System

When Locate is selected the status indicator on the GUI and the alarm LED will flash yellow in the following continuous sequence.

3 short flashes.... Pause.... 3 short flashes ...

Use of the locate function will not interfere with the normal operation of the module.

For more details on this feature please check the documentation supplied with the controller software.

Available Options

Below is a list of related products for the C AD 5132 CardModule. Please refer to product brochures or our web site for more detailed information.

Model	Description
R FR 5010	Series 5000 Rack Frame (empty) with single power supply
R FR 5011	Series 5000 Rack Frame (empty) with single power supply and fan front cover
R PS 5010	Redundant power supply for the R FR 5010 Card Frame
R CT 5030	Master controller with TCP/IP Interface for the R FR 5010/5011 Card Frame
R CT 5020	Rack controller for the R FR 5010 Card Frame
R CT 5010	Rack Bus Extension for the R FR 5010 Card Frame. In combination with R CT 5020

Parts List

Due to the very dense design and miniature surface mount technology the module is not field serviceable. The information for a replacement assembly is below.

Service

If you are experiencing problems, or have questions concerning your C AD 5132 CardModule please contact your local distributor for assistance.

We offer a fixed cost service exchange program for defective Series 5000 CardModules out of Warranty. Please contact your distributor or check our web site for details on this program.

More detailed information and product updates may be available on our web site:

www.lynx-technik.com

You will also find links to contact us directly for assistance.

Contact Information

Please contact your local distributor; this is your local and fastest method for obtaining support and sales information.

LYNX Technik can be contacted directly using the information below.

Address	LYNX Technik AG
