Warranty

LYNX Technik AG warrants that the product will be free from defects in materials and workmanship for a period of two (2) year from the date of shipment. If this product proves defective during the warranty period, LYNX Technik AG at its option will either repair the defective product without charge for parts and labor, or will provide a replacement in exchange for the defective product.

In order to obtain service under this warranty, customer must notify LYNX Technik of the defect before expiration of the warranty period and make suitable arrangements for the performance of service. Customer shall be responsible for packaging and shipping the defective product to the service center designated by LYNX Technik, with shipping charges prepaid. LYNX Technik shall pay for the return of the product to the customer if the shipment is within the country which the LYNX Technik service center is located. Customer shall be responsible for payment of all shipping charges, duties, taxes and any other charges for products returned to any other locations.

This warranty shall not apply to any defect, failure, or damage caused by improper use or improper or inadequate maintenance and care. LYNX Technik shall not be obligated to furnish service under this warranty a) to repair damage resulting from attempts by personnel other than LYNX Technik representatives to install, repair or service the product; b) to repair damage resulting from improper use or connection to incompatible equipment; c) to repair any damage or malfunction caused by the use of non LYNX Technik supplies; or d) to service a product which has been modified or integrated with other products when the effect of such modification or integration increases the time or difficulty servicing the product.

THIS WARRANTY IS GIVEN BY LYNX TECHNIK WITH RESPECT TO THIS PRODUCT IN LIEU OF ANY OTHER WARRANTIES, EXPRESS OR IMPLIED. LYNX TECHNIK AND ITS VENDORS DISCLAIM ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. LYNX TECHNIK'S RESPONISIBILITY TO REPAIR AND REPLACE DEFECTIVE PRODUCTS IS THE SOLE AND EXCLUSIVE REMEDY PROVIDED TO THE CUSTOMER FOR BREACH OF THIS WARRANTY. LYNX TECHNIK AND ITS VENDORS WILL NOT BE LIABLE FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTAL DAMAGES IRRESPECTIVE OF WHETHER LYNX TECHNIK OR THE VENDOR HAS ADVANCE NOTICE OF THE POSSIBILITY OF SUCH DAMAGES.

USA

FCC 47 Part 15

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Note: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to the part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense

Getting Started

Packaging

The shipping carton and packaging materials provide protection for the module during transit. Please retain the shipping cartons in case subsequent shipping of the product becomes necessary.

Product Description

The C MX 5110 is a high performance Audio Multiplexer for analog Audio and Video signals. It contains a 12 Bit Video A/D Converter for analog PAL/NTSC composite, component Y, Pr, Pb, and S-Video Y, C signals and a dual stereo 24 bit audio A/D converter. The module is designed primarily for broadcast and professional applications.

The analog video signal is converted into an SDI signal, the analog audio signal is converted into digiatl AES3 (balanced), which can be multiplexed into the SDI signal and is in parallel available on separate audio outputs on a SubD 25pin connector.

The audio signals for embedding as well as for the external output can be selected from the input signals on a mono channel basis.

The C MX 5110 features a wide range of available adjustments (via optional Rack Controller), basic adjustments are possible using the local multifunction switch and integrated display.

CardModules are installed in the series 5000 card frame that can accommodate up to 10 CardModules. All modules are hot swappable and Options include full redundant power and a range of controller options.

Functional Diagram

Figure 1 below is the basic functional diagram for the C MX 5110 CardModule.

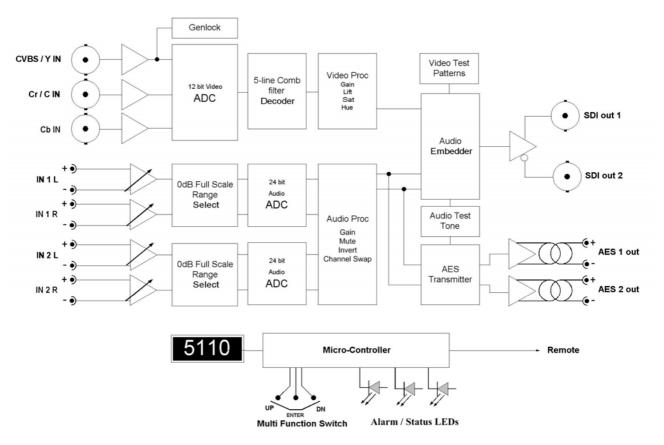

Figure 1- C MX 5110 Functional Diagram

Module Layout

Figure 2 shows the physical layout of the C MX 5110 CardModule and also the connection panel which is fitted to the rear of the rack.

PCB Layout

Rear Connection Panel

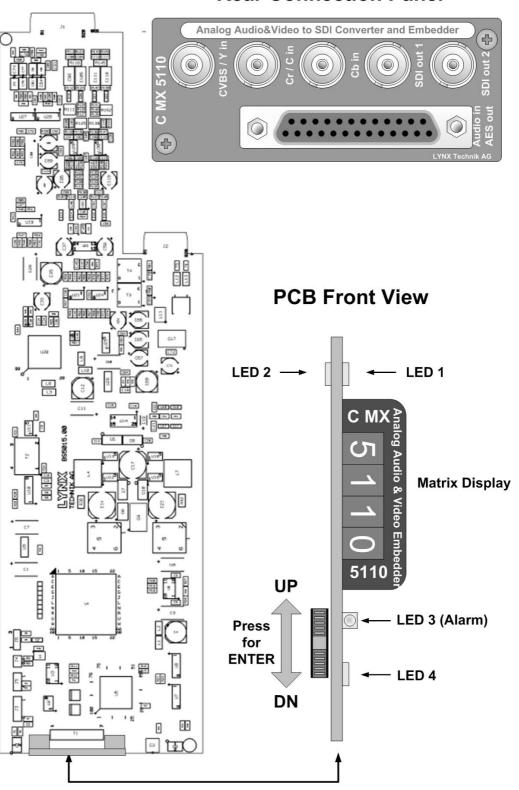

Figure 2 – Module Layout

Caution

Use static precautions when handling the PCB. Static discharge could result in serious damage to the module.

Connections

Video Connections

The C MX 5110 CardModule is configured with standard 75 Ohm BNC connectors. Connection is self-explanatory. We recommend the use of high quality video cable for digital video connections to reduce the risk of interference or errors due to excessive cable attenuation. Some guidelines for max cable length are shown below.

250m (820 feet) Belden 8281 (270Mbits/s)

Note. Due to the compact design of the connection plate it will be necessary to use a connection tool to secure the BNC video connectors.

Audio Connections

The C MX 5110 Module is configured for SubD audio connections for audio I/O. The SubD connector should be wired in accordance with the table below. Please use high quality screened cable to prevent the introduction of noise and interference to the audio signals (twisted pair suitable for balanced audio signals).

Audio Connections (balanced)

SubD 25 pin female connector. (TASCAM pinout)

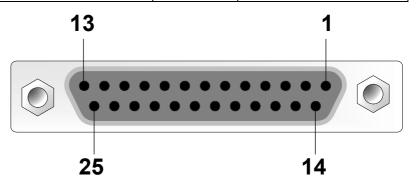

Figure 3 - Audio output connection detail

Audio Connections (un-balanced)

Although the module is designed primarily for balanced line audio connections it is possible to make unbalanced audio connections to the module. **NOTE**. When used in this manor certain technical specifications of the module cannot be maintained.

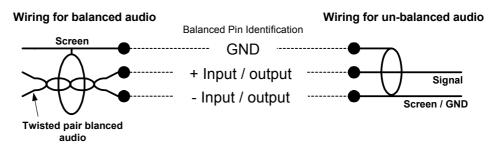

Figure 4 – Audio wiring detail

Installation

Caution

The CardModule is shipped in a protective anti-static bag. Please take suitable precautions to avoid static discharge onto any part of the PCB or components when handling module or serious damage could result.

Each Card Module is supplied with a rear connection panel and two mounting screws. Please follow the following procedure for installation of the card module into the Series 5000 Card Frame.

- a) Select a slot in the card frame where the CardModule will be located
- b) Remove the blank connection panel from the rear of the rack (if fitted)
- c) Install the rear connection panel using the screws supplied. Do not tighten the screws fully
- d) Slide the card module into the card frame and carefully check the CardModule easily connects to the rear connection plate. The card should fit easily and should not require excessive force to insert, if you feel any resistance, there could be something wrong with the rear connection panel location. Do not try and force the connection. Remove the rear connection panel and check alignment with the CardModule.
- e) Insert and remove the CardModule a few times to ensure correct alignment and then tighten the two screws to secure the rear connection plate

Settings and Control

The C MX 5110 has an integrated micro-controller, which enables the module to be configured and controlled locally using the multifunction switch and 4 character dot matrix display, or from remote when using one of the optional controllers and control software.

Once set, all settings are automatically saved in non-volatile internal memory. (Flash ram) The module will always recall the settings used prior to power down.

PCB Front View

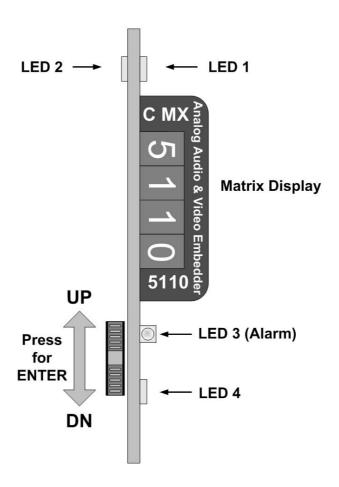

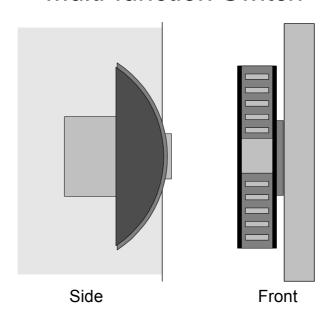

Figure 5 – Switch and Display Location

Multi Function Switch

The CardModule is equipped with a multi-function switch located on the front bottom edge of the card (refer to figure 2 and 5)

Multi-function Switch

Switch Operations

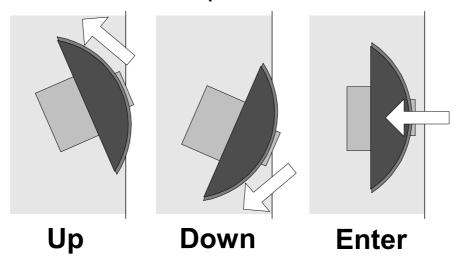

Figure 6 – Switch Operation

Using the Local Display Menus

Making local adjustments to the module is done using the multifunction switch and the integrated 4-character dot matrix display (figure 3). The menu system is layered, and navigation through the system is done using the **UP** and **DOWN** functions of the switch. **ENTER** is used to move between menu levels and also enter a selection.

Navigation

Switch Function	Operation
UP	Move UP within a level
DOWN	Move down within a level
ENTER	Change levels / Make selection

Local Adjustments Available

All of the critical adjustments to the module are accessible using the local display and multi - function switch, these include:

- Input select (CVBS, Component, Y/C)
- Genlock mode
- Luma-/ chroma filter settings
- Luma/ Chroma Comb mode
- Hue, Chroma, Pedestal, Gain
- CTI mode (Color Transition Improvement)
- DNR (Digital Noise Reduction)
- Test signal select
- Audio input selection
- Audio Gain
- Audio Full Scale Selection

Menu Structure

The Menu structure is defined in the next table, and should be used when navigating through the system.

Notes / Tips.

ENTER moves between Levels

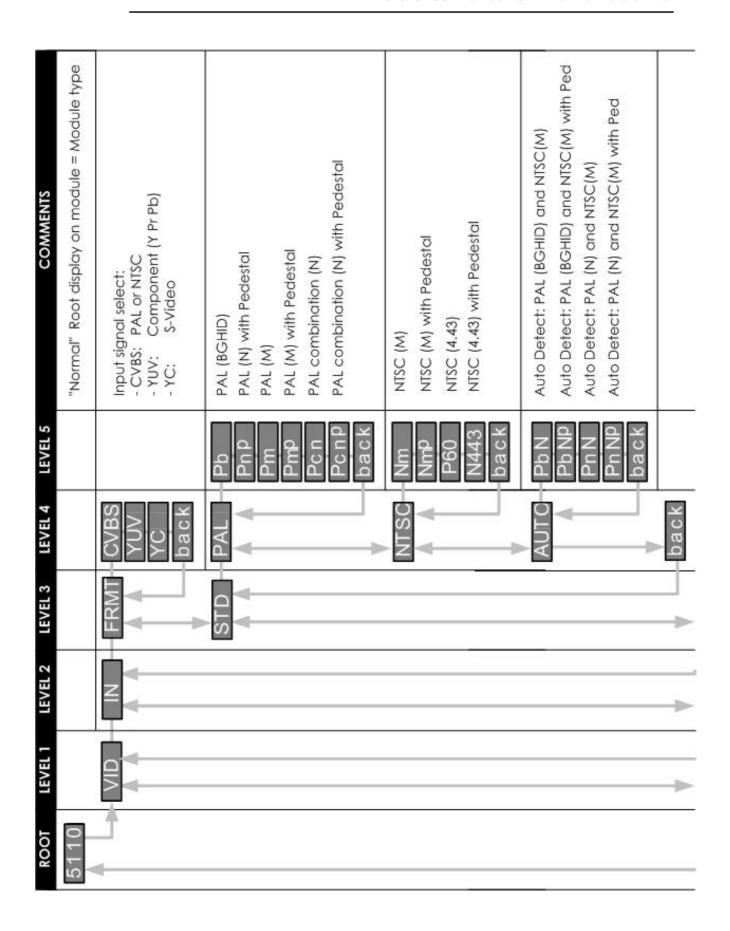

UP/DOWN moves between items within the level

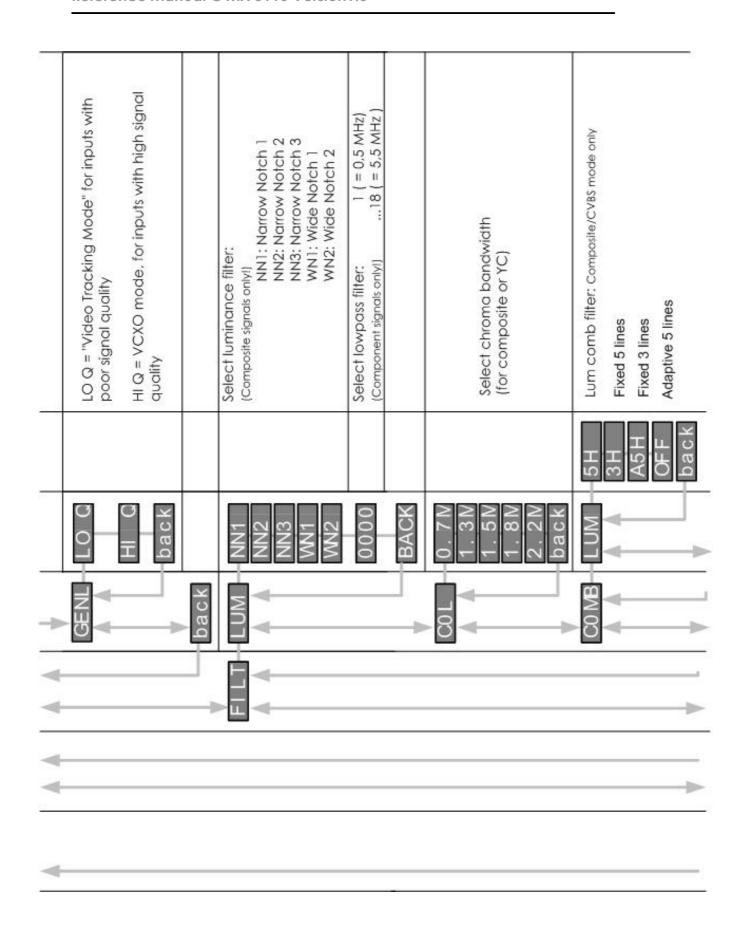

When you enter a new setting the system will jump back one level in the menu system.

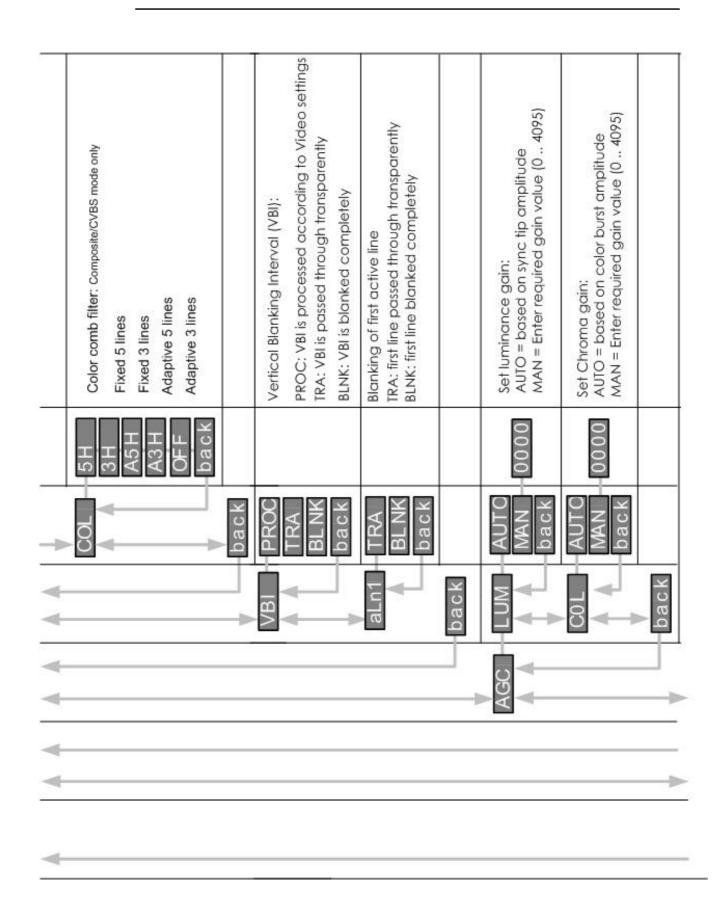

The "back" selection in the menu structure will take you back one level when selected.

When an item is selected which has several setting possibilities the first value displayed will be the value currently stored in the system. The order of the available settings for any menu item in the table supplied does not represent the order he settings will actually be displayed.

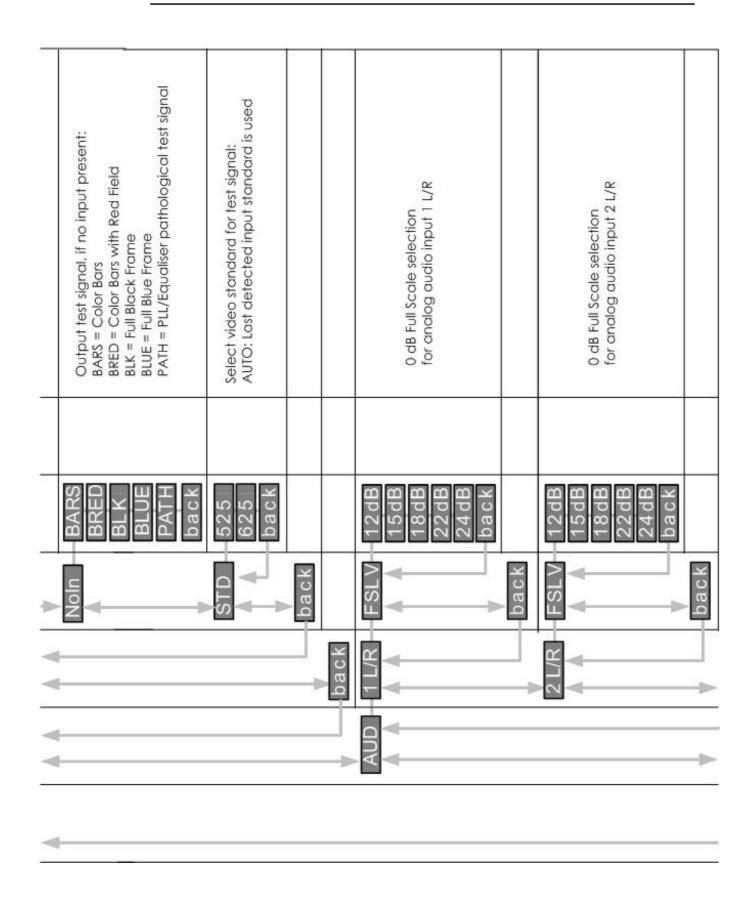

If left unattended, the menu will default to the root display after a preset timeout.

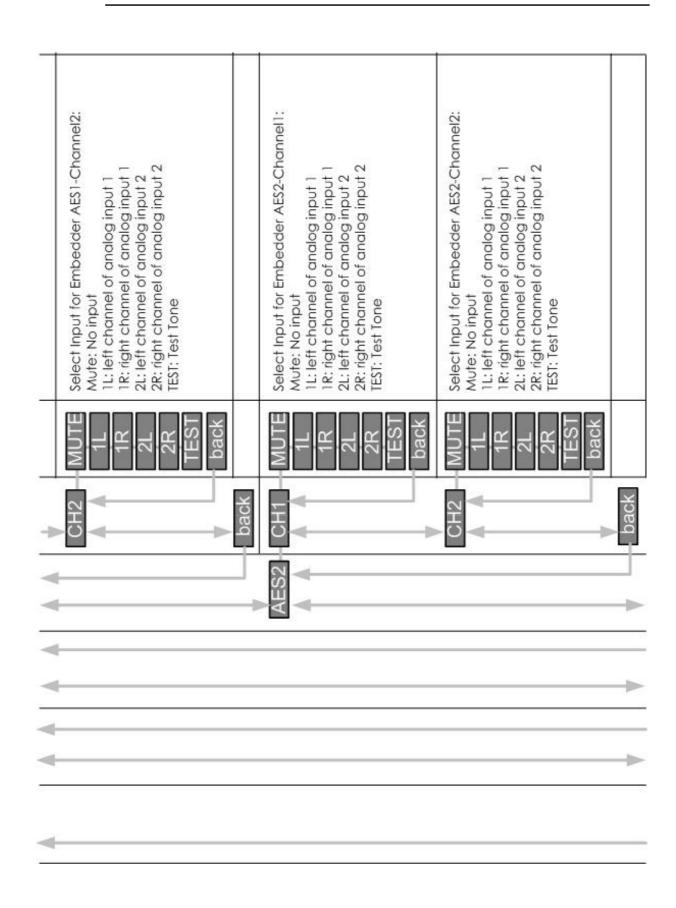

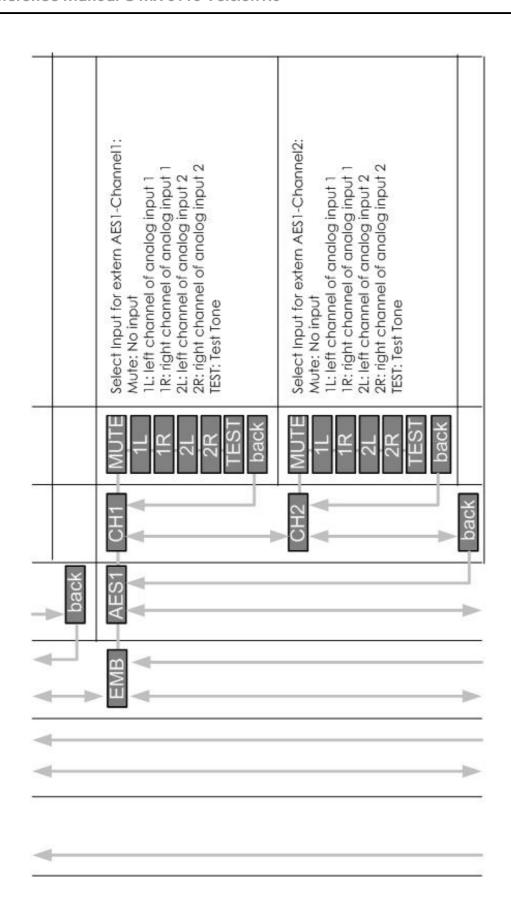

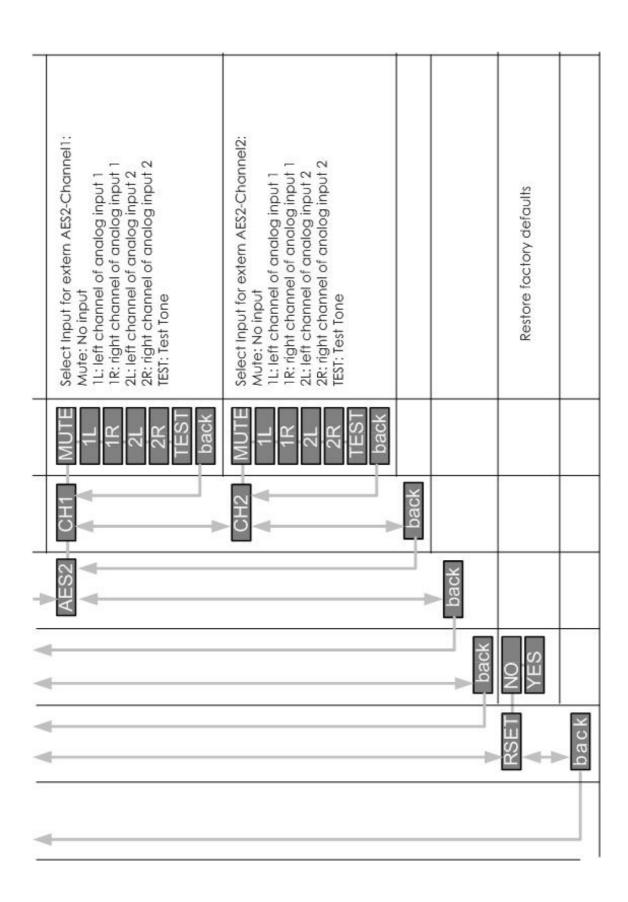

Hue: Enter required value (-128 0 +127)	Chroma Gain (Saturation): Enter required value (0 128 255)	Luma Pedestal (Brightness): Enter required value (-128 0 +127)	Luma Gain (Contrast): Enter required value (0 128 255)	Color Transition Improvement: Level 14	Digital Noise Reduction	Select test signal BARS = Color Bars BRED = Color Bars with Red Field BLK = Black BLUE = Full Blue Frame PATH = PLL/Equaliser pathological test signal

Factory Preset Condition

The C MX 5110 is delivered programmed and preset for the following mode of operation:

Mode CVBS

Standard PAL Pb (BGHID) or NTSC

(auto detect)

Genlock HI Q

Lum filter LP 18 (5,5 MHz)

Chroma filter 3,0 MHz for Component

1,8 MHz for CVBS

Chroma Comb filter adaptive 5 H
Luma Comb filter adaptive 5 H

VBI PROC (processed)

Audio Full Scale Level **15dBu**Audio Gain

OdB

Audio Group

Total

Test Tone Off

If this is the mode of operation required, then no adjustments are necessary.

These settings can be recalled at any time by selecting reset from the menu system.

Auto Store

If no parameters are changed for 10 seconds then the current settings will be written into flash memory automatically, this can be seen by the alarm LED flashing yellow four times.

Alarm/LED Status Indicators

The C MX 5110 module has integral LED indicators, which serve as alarm and status indication for the module. Function is described below.

Status Indicators

3 status LED's are provided on the front edge of the module, LED 1, LED 2, LED 4 (figure 2 and 5)

LED	Color	Indication
	Green	Video Input Present
1	Yellow	Video Test Signal active
	Red	No Video Input and no test signal selected
	Green	All Audio input present
2	Yellow	Test tone active or 13 audio signals missing
	Red	No audio inputs present
1	Green	525 Mode
4	Yellow	625 mode

Alarm Indicator

There is also a single alarm LED on the lower edge of the module LED 3. This is visible through the card frame front cover and provides a general indication of the module status.

LED Color	Indication
Green	Video and all audio signals present
Yellow	Video or audio inputs missing
Red	Video and audio missing

LED **OFF** indicates power is lost, or there is a power supply fault.

Locate Function

For larger systems which may have multiple cards of the same type in a single rack, or multiple rack systems on a large central control system we have added a useful utility which will help to visually locate a suspect module quickly (When used in conjunction with the optional control system and software)

Once the specific module has been selected on the control system there is a locate button on the top of the GUI:

Locate Function in Control System

When Locate is selected the status indicator on the GUI and the alarm LED will flash yellow in the following continuous sequence.

3 short flashes.... Pause.... 3 short flashes ...

Use of the locate function will not interfere with the normal operation of the module.

For more details on this feature please check the documentation supplied with the controller software.

Specifications (C MX 5110)

Inputs (video)

Signal NTSC (M/N), PAL (B/D/G/H/I/M/N),

Y / Pr / Pb Y / C (S-Video)

AC coupled, differential inputs

Input Impedance 75 Ohms, BNC

Outputs (Video)

Signal 2 x serial 4:2:2 SMPTE 259M-C (270 Mbps)

Output Level 0.8V p-p nom.

Jitter < 0.2UI
Connection BNC
Output Impedance 75 Ohms

Operating Modes (Video)

Documentation C MX 5110 Reference Manual

Available Options

Below is a list of related products for the C MX 5110 CardModule. Please refer to product brochures or our web site for more detailed information.

Model	Description
R FR 5010	Series 5000 Rack Frame (empty) with single power supply
R PS 5010	Redundant power supply for the R FR 5010 Card Frame
R CT 5020	Rack controller for the R FR 5010 Card Frame
R CT 5030	Master controllerwith TCP/IP Interface for the R FR 5010 Card Frame
R CT 5010	Rack Bus Extension for the R FR 5010 Card Frame. In combination with R CT 5020/5030

Parts List

Due to the very dense design and miniature surface mount technology the module is not field serviceable. The information for a replacement assembly is below.

C MX 5110 CardModule (complete)

Description Analog Audio & Vid. Muxer

Model Number C MX 5110
Part Number 5.155.000.010

Sub Assemblies:

C MX 5110 Processing Board only (BS5015 B)

Part Number 5.155.000.015

Rear Connection Panel for C MX 5110 (MA5028 A)

Part Number 6.155.009.221

Service

If you are experiencing problems, or have questions concerning your C MX 5110 CardModule please contact your local distributor for assistance.

We offer a fixed cost service exchange program for defective Series 5000 CardModules out of Warranty. Please contact your distributor or check our web site for details on this program.

More detailed information and product updates may be available on our web site:

www.lynx-technik.com

You will also find links to contact us directly for assistance.

Contact Information

Please contact your local distributor; this is your local and fastest method for obtaining support and sales information.

LYNX Technik can be contacted directly using the information below.
