Warranty

LYNX Technik AG warrants that the product will be free from defects in materials and workmanship for a period of two (2) year from the date of shipment. If this product proves defective during the warranty period, LYNX Technik AG at its option will either repair the defective product without charge for parts and labor, or will provide a replacement in exchange for the defective product.

In order to obtain service under this warranty, customer must notify LYNX Technik of the defect before expiration of the warranty period and make suitable arrangements for the performance of service. Customer shall be responsible for packaging and shipping the defective product to the service center designated by LYNX Technik, with shipping charges prepaid. LYNX Technik shall pay for the return of the product to the customer if the shipment is within the country which the LYNX Technik service center is located. Customer shall be responsible for payment of all shipping charges, duties, taxes and any other charges for products returned to any other locations.

This warranty shall not apply to any defect, failure, or damage caused by improper use or improper or inadequate maintenance and care. LYNX Technik shall not be obligated to furnish service under this warranty a) to repair damage resulting from attempts by personnel other than LYNX Technik representatives to install, repair or service the product; b) to repair damage resulting from improper use or connection to incompatible equipment; c) to repair any damage or malfunction caused by the use of non LYNX Technik supplies; or d) to service a product which has been modified or integrated with other products when the effect of such modification or integration increases the time or difficulty servicing the product.

THIS WARRANTY IS GIVEN BY LYNX TECHNIK WITH RESPECT TO THIS PRODUCT IN LIEU OF ANY OTHER WARRANTIES, EXPRESS OR IMPLIED. LYNX TECHNIK AND ITS VENDORS DISCLAIM ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. LYNX TECHNIK`S RESPONISIBILITY TO REPAIR AND REPLACE DEFECTIVE PRODUCTS IS THE SOLE AND EXCLUSIVE REMEDY PROVIDED TO THE CUSTOMER FOR BREACH OF THIS WARRANTY. LYNX TECHNIK AND ITS VENDORS WILL NOT BE LIABLE FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTAL DAMAGES IRRESPECTIVE OF WHETHER LYNX TECHNIK OR THE VENDOR HAS ADVANCE NOTICE OF THE POSSIBILITY OF SUCH DAMAGES.

Declaration of Conformity

We LYNX Technik AG
Brunneweg 3
D-64331 Weiterstadt
Germany

Declare under our sole responsibility that the product

TYPE: S VD 5012

To which this declaration relates is in conformity with the following standards (environments E1-E3):

EN 55103-1 /1996
EN 55103-2 /1996
EN 60950 /2001

Following the provisions of 89/336/EEC and 73/23/EEC directives.

FCC 47 Part 15

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Note: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to the part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

Getting Started

Packaging

The shipping carton and packaging materials provide protection for the module during transit. Please retain the shipping cartons in case subsequent shipping of the product becomes necessary.

Product Description

The S VD 5012 is a high quality digital video distribution amplifier designed primarily for broadcast and professional applications.

The flexible architecture allows the S VD 5012 to be used in multiple configurations. Outputs can be set to reclocked or non-reclocked.
Different modes of input switching are available: Automatic, Automatic latched, Manual or GPI.
A GPO signal is available to trigger external devices via a BNC connection.
The PREVIEW output always shows the non-used input, while the MAIN output shows the currently used input.

The S VD 5012 is part of the 5000 series of CardModules, which offer high quality, modularity and flexibility in a small form factor ideal for applications where space is at a premium.

CardModules are installed in the series 5000 card frame that can accommodate up to 10 CardModules. All modules are hot swappable and Options include full redundant power and a range of controller options.

Functional Diagram

Figure 1 below is the basic functional diagram for the S VD 5012 CardModule.

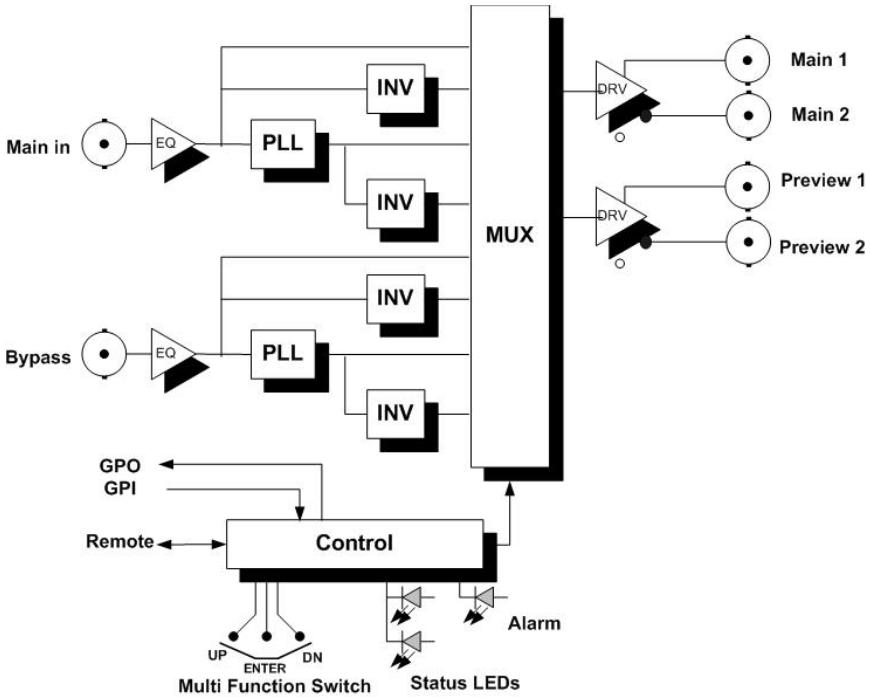

Figure 1- S VD 5012 Functional Diagram

Module Layout

Figure 2 shows the layout of the S VD 5012 CardModule and the rear connection panel. Please refer the connections section of this manual for wiring details for the connectors.

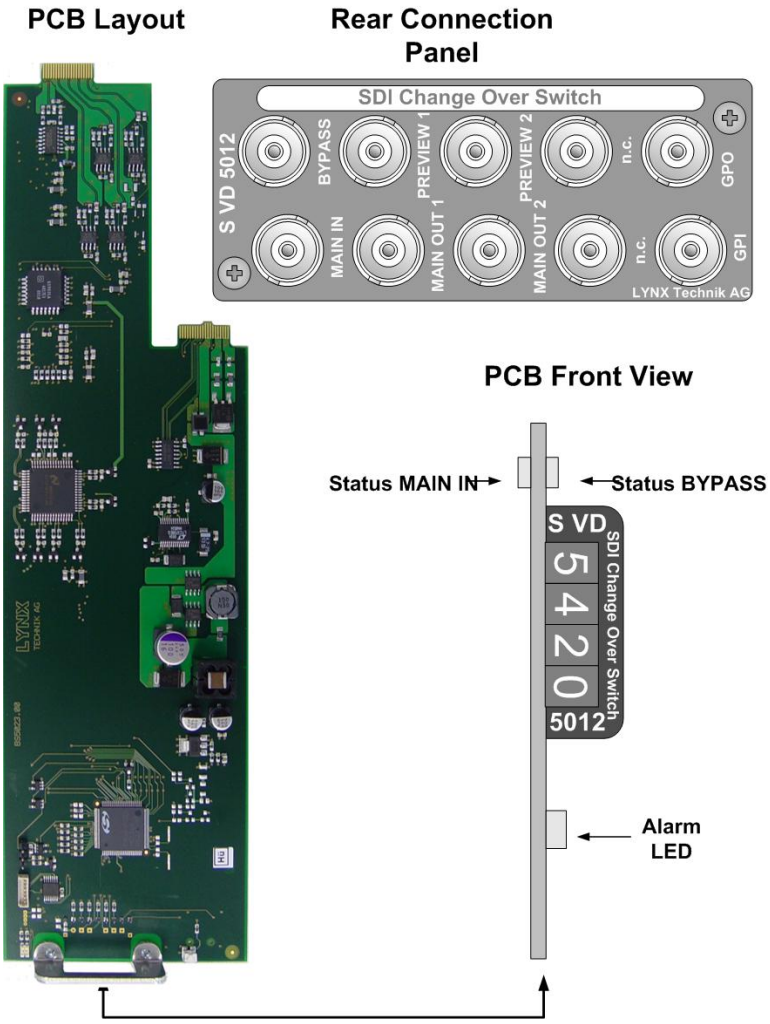

Figure 2 – Module Layout

Caution

Use static precautions when handling the PCB. Static discharge could result in serious damage to the module.

Connections

Video Connections

The S VD 5012 CardModule is configured with standard 75 Ohm BNC connectors. Connection is self-explanatory. We recommend the use of high quality video cable for digital video connections to reduce the risk of interference or errors due to excessive cable attenuation.

Note. Due to the compact design of the connection plate it will be necessary to use a connection tool to secure the BNC video connectors.

Switch Modes

The S VD 5012 CardModule can be switched through various modes.

Note:

MAIN OUT and PREVIEW are switched simultaneously.
If MAIN OUT = MAIN IN then PREVIEW = BYPASS
If MAIN OUT = BYPASS then PREVIEW = MAIN IN

MANUAL : If this mode is selected the outputs can be switched manually via the front control on the module (multi function DIP switch and matrix display) or via the GUI-SW (requires optional LYNX controller)

AUTOMATIC: If this mode is selected MAIN OUT is switched automatically from MAIN IN to BYPASS, if MAIN IN is lost.
If MAIN IN is present again, MAIN OUT will be switched back automatically to MAIN IN

AUTOMATIC LATCHED: If this mode is selected MAIN OUT is switched automatically from MAIN IN to BYPASS, if MAIN IN is lost. MAIN OUT is latched to BYPASS then. MAIN OUT can be switched back to BYPASS with the other available modes.

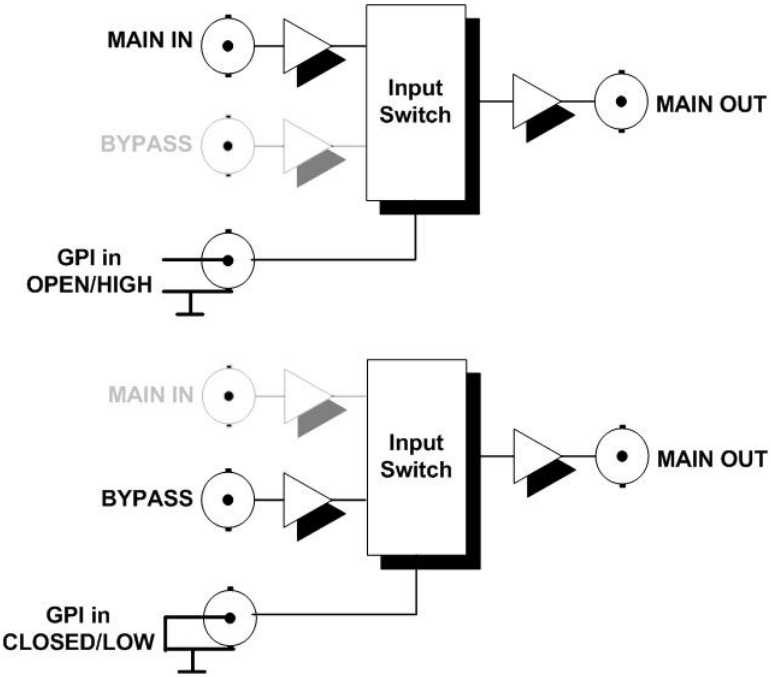
GPI: If this mode is selected MAIN OUT can be switched back and force by an external signal through the GPI on the module (see below)

GPIM: If this mode is selected MAIN OUT is forced to MAIN IN and is latched. It can be switched back to BYPASS with the manual switch, which is active in this mode.

GPIB: If this mode is selected MAIN OUT is forced to BYPASS and latched. It can be switched back to MAIN IN with the manual switch, which is active in this mode.

GPI

The S VD 5012 CardModule is configured with a standard 75 Ohm BNC connector for a General Purpose Input (GPI). If Switch Mode "GPI" is selected the input switch can be externally triggered/switched through this GPI.



GPO

The S VD 5012 CardModule is configured with a standard 75 Ohm BNC connector for a General Purpose Output (GPO). This GPO is used to trigger external devices according to the internal status of the S VD 5012.
GPO = HIGH (5V) if MAIN OUT = MAIN IN
GPO = LOW (0V) if MAIN OUT = BYPASS

Installation

Caution
The CardModule is shipped in a protective anti-static bag. Please take suitable precautions to avoid static discharge onto any part of the PCB or components when handling module or serious damage could result.

Each Card Module is supplied with a rear connection panel and two mounting screws. Please follow the following procedure for installation of the card module into the Series 5000 Card Frame.

a) Select a slot in the card frame where the CardModule will be located
b) Remove the blank connection panel from the rear of the rack (if fitted)
c) Install the rear connection panel using the screws supplied. Do not tighten the screws fully
d) Slide the card module into the card frame and carefully check the CardModule easily connects to the rear connection plate. The card should fit easily and should not require excessive force to insert, if you feel any resistance, there could be something wrong with the rear connection panel location. Do not try and force the connection. Remove the rear connection panel and check alignment with the CardModule.
e) Insert and remove the CardModule a few times to ensure correct alignment and then tighten the two screws to secure the rear connection plate

Settings and Control

The S VD 5012 has an integrated micro-controller, which enables the module to be configured and controlled locally using the multifunction switch and 4 character dot matrix display, or from remote when using one of the optional controllers and control software.

Once set, all settings are automatically saved in non-volatile internal memory. (Flash ram) The module will always recall the settings used prior to power down.

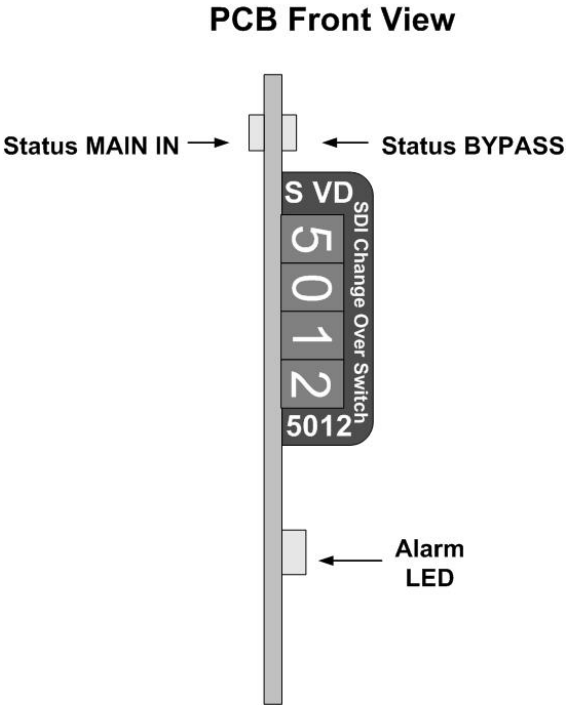


Figure 3 – Switch and Display Location

Multi Function Switch

The CardModule is equipped with a multi-function switch located on the front bottom edge of the card (refer to figure 3)

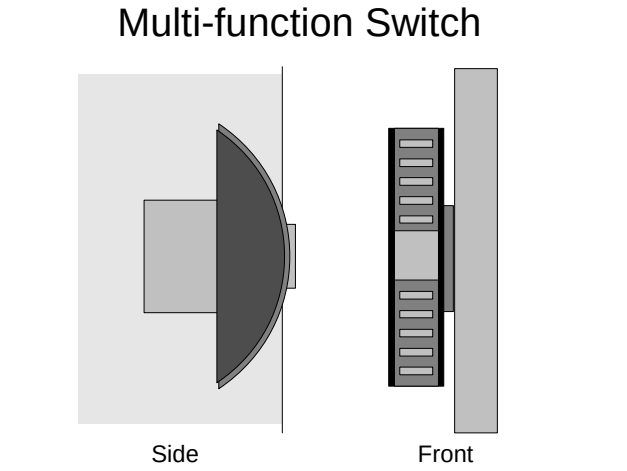

Figure 4 – Switch Operation

Using the Local Display Menus

Making local adjustments to the module is done using the multifunction switch and the integrated 4-character dot matrix display (figure 3). The menu system is layered, and navigation through the system is done using the **UP** and **DOWN** functions of the switch. **ENTER** is used to move between menu levels and also enter a selection.

Navigation

Switch Function	Operation
UP	Move UP within a level
DOWN	Move down within a level
ENTER	Change levels / Make selection

Menu Structure

The Menu structure is defined in the next table, and should be used when navigating through the system.

Notes / Tips.
ENTER moves between Levels
UP/DOWN moves between items within the level
When you enter a new setting the system will jump back one level in the menu system.

- The "back" selection in the menu structure will take you back one level when selected.
- When an item is selected which has several setting possibilities the first value displayed will be the value currently stored in the system. The order of the available settings for any menu item in the table supplied does not represent the order he settings will actually be displayed.
- If left unattended, the menu will default to the root display after a preset timeout.

Auto Store

If no parameters are changed for 10 seconds then the current settings will be written into flash memory automatically, this can be seen by the channel status LEDS flashing yellow four times.

Alarm/LED Status Indicators

The S VD 5012 module has integral LED indicators, which serve as alarm and status indication for the module. Function is described below.

Channel Condition Indicators

2 status LEDs are provided on the top edge of the module, one for each channel (MAIN, BYPASS; figure 3)

LED Color	Indication
Green	Input Present and used on MAIN OUT
Yellow	Input Present, other input used on MAIN OUT
Red	Input Lost

Alarm Indicator

There is also a single alarm LED on the lower edge of the module (figure 3). This is visible through the card frame front cover and provides a general indication of the module status.

LED Color	Indication
Green	MAIN IN present and used on MAIN OUT
Yellow	BYPASS used on MAIN OUT or one input lost
Red	Both Input signals lost

LED **OFF** indicates power is lost, or there is a power supply fault.

Locate Function

For larger systems which may have multiple cards of the same type in a single rack, or multiple rack systems on a large central control system we have added a useful utility which will help to visually locate a suspect module quickly (When used in conjunction with the optional control system and software)

Once the specific module has been selected on the control system there is a locate button on the top of the GUI:

Locate Function in Control System

When Locate is selected the status indicator on the GUI and the alarm LED will flash yellow in the following continuous sequence.

3 short flashes…. Pause…. 3 short flashes …

Use of the locate function will not interfere with the normal operation of the module.

For more details on this feature please check the documentation supplied with the controller software.

Specifications *(S VD 5012)*

Inputs	
Signal	2 Serial Digital Video. SMPTE 259M-C
Input Impedance	75 Ohms
Input level	0.8V p-p
Return loss	> 15dB (270MHz)
Connection	BNC
Outputs	
Signal	4 Serial Digital Video (2 x MAIN out, 2 x Preview)
Output Impedance	75 Ohms
Output Level	0.8V p-p nom.
Return loss	> 15dB (270 Mbit/s)
Connection	BNC
Switch Modes	Automatic, Automatic latched, Manual, GPI
Performance	
Cable Equalization	Up to 250m using Belden 8281 (270Mbit/s)
Jitter	< 0.2 UI
Control	Local settings (matrix display and multifunction switch).
Status Monitoring (LED)	Signal presence and PLL lock indication
Electrical Specifications	
Operating Voltage	+ 5VDC
Power Consumption	3.5 W
Safety	IEC 60950/ EN 60950/VDE 0805
Mechanical	
Size	283mm x 78mm
Weight	Card module 120g, connection panel 50g
Ambient	
Temperature	5°C to 40°C Maintaining specifications
Humidity	Max 90% non condensing
Supplied Accessories	
Documentation	S VD 5012 Reference Manual

Available Options

Below is a list of related products for the S VD 5012 CardModule. Please refer to product brochures or our web site for more detailed information.

Model	Description
R FR 5010	Series 5000 Rack Frame (empty) with single power supply
R PS 5010	Redundant power supply for the R FR 5010 Card Frame
R CT 5020	Rack controller for the R FR 5010 Card Frame
R CT 5030	Master controller with TCP/IP interface for the R FR 5010 Card Frame
R CT 5010	Rack Bus Extension for the R FR 5010 Card Frame. In combination with R CT 5020/5030
SD V RL1	Relay Connection Panel for S VD 5012. Connects MAIN IN with MAIN OUT 1 via a Relay contact in case of loss of power

Parts List

Due to the very dense design and miniature surface mount technology the module is not field serviceable. The information for a replacement assembly is below.

S VD 5012 CardModule (complete)

Description SDI Change Over Switch
Model Number S VD 5012
Part Number 5.155.003.010

Sub Assemblies:

S VD 5012 Processing Board only. (BS 5023_C)
Part Number 5.155.003.015

Rear Connection Panel for S VD 5012 (MA5001_B)
Part Number 6.155.008.371

Service

If you are experiencing problems, or have questions concerning your S VD 5012 CardModule please contact your local distributor for assistance.

We offer a fixed cost service exchange program for defective Series 5000 CardModules out of Warranty. Please contact your distributor or check our web site for details on this program.

More detailed information and product updates may be available on our web site:

www.lynx-technik.com

You will also find links to contact us directly for assistance.

Contact Information

Please contact your local distributor; this is your local and fastest method for obtaining support and sales information.

LYNX Technik can be contacted directly using the information below.
